**User Manual** 

## **Important User Information**

Solid state equipment has operational characteristics differing from those of electromechanical equipment. *Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls* (Publication SGI-1.1 available from your local Rockwell Automation sales office or online at

http://www.rockwellautomation.com/literature) describes some important differences between solid state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc. is prohibited.

Throughout this manual, when necessary we use notes to make you aware of safety considerations.

**WARNING:** Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

**Important:** Identifies information that is critical for successful application and understanding of the product.

**ATTENTION:** Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you:

- identify a hazard
- · avoid the hazard
- recognize the consequences

**Shock Hazard** labels may be located on or inside the equipment (e.g., drive or motor) to alert people that dangerous voltage may be present.

**Burn Hazard** labels may be located on or inside the equipment (e.g., drive or motor) to alert people that surfaces may be at dangerous temperatures.

Allen-Bradley, Rockwell Automation, and PowerFlex are registered trademarks of Rockwell Automation, Inc.

DriveExplorer, DriveExecutive, and SCANport are trademarks of Rockwell Automation, Inc.

PLC is a registered trademark of Rockwell Automation, Inc.

# Summary of Changes

The information below summarizes the changes to the PowerFlex 4M *User Manual* since the July 2008 release.

# **Manual Updates**

Description of New or Updated Information	Page(s)
Minimum Enclosure Volume column and new footnotes added.	<u>1-8, A-2</u>
Drive, Fuse & Circuit Breaker Ratings topic updated.	A-1
Electronic Motor Overload Protection description updated.	<u>A-4</u>

The information below summarizes the changes to the PowerFlex 4M *User Manual* since the August 2007 release.

### **Manual Updates**

Description of New or Updated Information	Page(s)
Footnote (2) deleted from "EN61800-3 Second Environment" in Table 1.1.	1-22
Note to stop drive before changing parameter <u>t211</u> [Anlg In 0-10V Lo] removed.	<u>3-14</u>
New option 13, I/O Control, for parameter t221 [Relay Out Sel] added.	<u>3-15</u>
Fault description for F3 corrected.	<u>4-3</u>
Corrected Table B.F by adding the 0.75 kW (1.0 HP) and 1.5 kW (2.0 HP) ratings for the 22F-RF025-BL EMC line filter.	<u>B-4</u>
Description for bits 14, 13, and 12 of register address 8192 corrected.	<u>C-4</u>
Information on reading register address 8192 clarified.	<u>C-4</u>
Description for bits 6, 7, and 15 of register address 8192 updated.	<u>C-4</u>
Information on reading register address 8193 clarified.	<u>C-5</u>
Figure C.1, Network Wiring Diagram, updated.	<u>C-1</u>
Guidelines on standard RS485 wiring practices added.	<u>C-1</u>

The information below summarizes the changes to the PowerFlex 4M *User Manual* since the February 2007 release.

# **Manual Updates**

Description of New or Updated Information	Page(s)
Input description and attention text for Multiple Digital Input Connection example corrected.	<u>1-18</u>
Description for option 21 of parameter t221 [Relay Out Sel] corrected.	<u>3-15</u>
Invalid catalog number for L Type Filter deleted.	B-4, B-10
Graphic for the "Connecting an RS-485 Network" section corrected	<u>D-3</u>

# **Overview**

The purpose of this manual is to provide you with the basic information needed to install, start-up and troubleshoot the PowerFlex 4M Adjustable Frequency AC Drive.

For information on	See page
Who Should Use this Manual?	P-1
Reference Materials	<u>P-1</u>
Manual Conventions	P-2
Drive Frame Sizes	<u>P-2</u>
General Precautions	<u>P-3</u>
Catalog Number Explanation	P-4

### Who Should Use this Manual?

This manual is intended for qualified personnel. You must be able to program and operate Adjustable Frequency AC Drive devices. In addition, you must have an understanding of the parameter settings and functions.

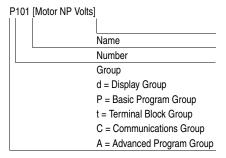

# **Reference Materials**

The following manuals are recommended for general drive information:

Title	Publication	Available Online at
Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives	DRIVES-IN001	
Preventive Maintenance of Industrial Control and Drive System Equipment	DRIVES-SB001	
Safety Guidelines for the Application, Installation and Maintenance of Solid State Control	SGI-1.1	www.rockwellautomation.com/ literature
A Global Reference Guide for Reading Schematic Diagrams	0100-2.10	
Guarding Against Electrostatic Damage	8000-4.5.2	

### **Manual Conventions**

- In this manual we refer to the PowerFlex 4M Adjustable Frequency AC Drive as: drive, PowerFlex 4M or PowerFlex 4M Drive.
- Parameter numbers and names are shown in this format:

 The following words are used throughout the manual to describe an action:

Word	Meaning
Can	Possible, able to do something
Cannot	Not possible, not able to do something
May	Permitted, allowed
Must	Unavoidable, you must do this
Shall	Required and necessary
Should	Recommended
Should Not	Not Recommended

#### **Drive Frame Sizes**

Similar PowerFlex 4M drive sizes are grouped into frame sizes to simplify spare parts ordering, dimensioning, etc. A cross-reference of drive catalog numbers and their respective frame sizes is provided in <a href="https://example.com/appendix-B">Appendix B</a>.

#### **General Precautions**

**ATTENTION:** To avoid an electric shock hazard, verify that the voltage on the bus capacitors has discharged before performing any work on the drive. Measure the DC bus voltage at the –DC and +DC terminals on the Power Terminal Block (refer to <a href="Chapter 1">Chapter 1</a> Power Terminal descriptions). The voltage must be zero.

Darkened LEDs or a darkened LCD display is not an indication that capacitors have discharged to safe voltage levels.

**ATTENTION:** Only qualified personnel familiar with adjustable frequency AC drives and associated machinery should plan or implement the installation, start-up and subsequent maintenance of the system. Failure to comply may result in personal injury and/or equipment damage.

**ATTENTION:** This drive contains ESD (Electrostatic Discharge) sensitive parts and assemblies. Static control precautions are required when installing, testing, servicing or repairing this assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with static control procedures, reference A-B publication 8000-4.5.2, "Guarding Against Electrostatic Damage" or any other applicable ESD protection handbook.

**ATTENTION:** An incorrectly applied or installed drive can result in component damage or a reduction in product life. Wiring or application errors, such as, undersizing the motor, incorrect or inadequate AC supply, or excessive ambient temperatures may result in malfunction of the system.

**ATTENTION:** The bus regulator function is extremely useful for preventing nuisance overvoltage faults resulting from aggressive decelerations, overhauling loads, and eccentric loads. However, it can also cause either of the following two conditions to occur.

- 1. Fast positive changes in input voltage or imbalanced input voltages can cause uncommanded positive speed changes;
- Actual deceleration times can be longer than commanded deceleration times.

However, a "Stall Fault" is generated if the drive remains in this state for 1 minute. If this condition is unacceptable, the bus regulator must be disabled (see parameter A441). In addition, installing a properly sized dynamic brake resistor will provide equal or better performance in most cases.

# Installation/Wiring

This chapter provides information on mounting and wiring the PowerFlex 4M Drive.

For information on	See page
Opening the Cover	1-1
Mounting Considerations	<u>1-2</u>
AC Supply Source Considerations	<u>1-3</u>
General Grounding Requirements	<u>1-5</u>

For information on	See page
Fuses and Circuit Breakers	<u>1-7</u>
Power Wiring	<u>1-9</u>
I/O Wiring	<u>1-13</u>
Recommendations	
EMC Instructions	1-21

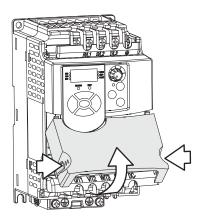

Most start-up difficulties are the result of incorrect wiring. Every precaution must be taken to assure that the wiring is done as instructed. All items must be read and understood before the actual installation begins.

**ATTENTION:** The following information is merely a guide for proper installation. Rockwell Automation, Inc. cannot assume responsibility for the compliance or the noncompliance to any code, national, local or otherwise for the proper installation of this drive or associated equipment. A hazard of personal injury and/or equipment damage exists if codes are ignored during installation.

# **Opening the Cover**

- 1. Press and hold in the tabs on each side of the cover.
- 2. Pull the cover out and up to release.

# **Mounting Considerations**

- Mount the drive upright on a flat, vertical and level surface.
  - Install on 35 mm DIN Rail (for frames A and B).
     or
  - Install with screws.

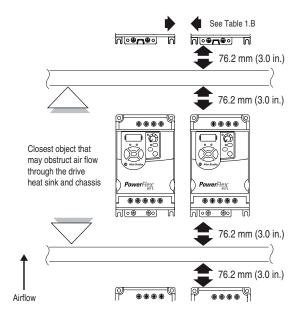

Table 1.A Screw Mounting Recommendations

Minimum Panel Thickness	Screw Size	Mounting Torque
1.9 mm (0.0747 in.)	M4 (#8-32)	1.56-1.96 N-m (14-17 lbin.)

- Protect the cooling fan by avoiding dust or metallic particles.
- Do not expose to a corrosive atmosphere.
- Protect from moisture and direct sunlight.

#### **Minimum Mounting Clearances**

Refer to Appendix B for mounting dimensions.

# **Ambient Operating Temperatures**

Table 1.B Enclosure and Clearance Requirements

Horizontal Clearance between drives	Ambient Temperature	
nonzoniai Clearance between unives	Minimum	Maximum
0 mm and greater	-10°C (14°F)	40°C (104°F)
25 mm and greater	-10°C (14°F)	50°C (122°F)

Drive enclosure is rated IP20, NEMA/UL Type Open.

#### Storage

- Store within an ambient temperature range of -40° to +85°C.
- Store within a relative humidity range of 0% to 95%, non-condensing.
- Do not expose to a corrosive atmosphere.

# **AC Supply Source Considerations**

#### **Ungrounded Distribution Systems**

**ATTENTION:** PowerFlex 4M drives contain protective MOVs that are referenced to ground. These devices must be disconnected if the drive is installed on an ungrounded or resistive grounded distribution system.

#### Disconnecting MOVs

To prevent drive damage, the MOVs connected to ground shall be disconnected if the drive is installed on an ungrounded distribution system where the line-to-ground voltages on any phase could exceed 125% of the nominal line-to-line voltage. To disconnect these devices, remove the jumper shown in the Figures 1.1 and 1.2.

- 1. Turn the screw counterclockwise to loosen.
- **2.** Pull the jumper completely out of the drive chassis.
- **3.** Tighten the screw to keep it in place.

Figure 1.1 Jumper Location (Frame A shown)

#### Important:

Tighten screw after jumper removal.

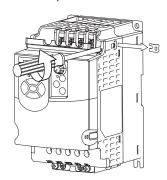

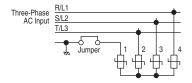

Figure 1.2 Phase to Ground MOV Removal

# **Input Power Conditioning**

The drive is suitable for direct connection to input power within the rated voltage of the drive (see <u>Appendix A</u>). Listed in <u>Table 1.C</u> are certain input power conditions which may cause component damage or reduction in product life. If any of the conditions exist, as described in <u>Table 1.C</u>, install one of the devices listed under the heading *Corrective Action* on the line side of the drive.

**Important:** Only one device per branch circuit is required. It should be mounted closest to the branch and sized to handle the total current of the branch circuit

Table 1.C Input Power Conditions

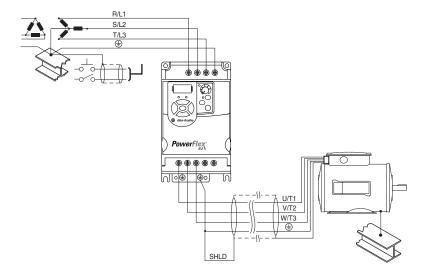

Input Power Condition	Corrective Action
Low Line Impedance (less than 1% line reactance)	Install Line Reactor <sup>(1)</sup>
Greater than 120 kVA supply transformer	or Isolation Transformer
Line has power factor correction capacitors	
Line has frequent power interruptions	
Line has intermittent noise spikes in excess of 6000V (lightning)	
Phase to ground voltage exceeds 125% of normal line to line voltage	<ul><li>Remove MOV jumper to ground.</li><li>or Install Isolation Transformer</li></ul>
Ungrounded distribution system	with grounded secondary if necessary.

<sup>(1)</sup> Refer to Appendix B for accessory ordering information.

# **General Grounding Requirements**

The drive Safety Ground - (F) (PE) must be connected to system ground. Ground impedance must conform to the requirements of national and local industrial safety regulations and/or electrical codes. The integrity of all ground connections should be periodically checked.

Figure 1.3 Typical Grounding

### **Ground Fault Monitoring**

If a system ground fault monitor (RCD) is to be used, only Type B (adjustable) devices should be used to avoid nuisance tripping.

## Safety Ground - (+) (PE)

This is the safety ground for the drive that is required by code. One of these points must be connected to adjacent building steel (girder, joist), a floor ground rod or bus bar. Grounding points must comply with national and local industrial safety regulations and/or electrical codes.

#### Motor Ground

The motor ground must be connected to one of the ground terminals on the drive.

#### Shield Termination - SHLD

Either of the safety ground terminals located on the power terminal block provides a grounding point for the motor cable shield. The **motor cable** shield connected to one of these terminals (drive end) should also be connected to the motor frame (motor end). Use a shield terminating or EMI clamp to connect the shield to the safety ground terminal. The conduit box option may be used with a cable clamp for a grounding point for the cable shield.

When shielded cable is used for **control and signal wiring**, the shield should be grounded at the source end only, not at the drive end.

#### **RFI Filter Grounding**

Using single phase drives with integral filter, or an external filter with any drive rating, may result in relatively high ground leakage currents. Therefore, the **filter must only be used in installations with grounded AC supply systems and be permanently installed and solidly grounded** (bonded) to the building power distribution ground. Ensure that the incoming supply neutral is solidly connected (bonded) to the same building power distribution ground. Grounding must not rely on flexible cables and should not include any form of plug or socket that would permit inadvertent disconnection. Some local codes may require redundant ground connections. The integrity of all connections should be periodically checked.

#### **Fuses and Circuit Breakers**

The PowerFlex 4M does not provide branch short circuit protection. This product should be installed with either input fuses or an input circuit breaker. National and local industrial safety regulations and/or electrical codes may determine additional requirements for these installations.

**ATTENTION:** To guard against personal injury and/or equipment damage caused by improper fusing or circuit breaker selection, use only the recommended line fuses/circuit breakers specified in this section.

#### **Fusing**

The PowerFlex 4M has been UL tested and approved for use with input fuses. The ratings in the table that follows are the maximum recommended values for use with each drive rating. The devices listed in this table are provided to serve as a guide.

# Bulletin 140M (Self-Protected Combination Controller)/UL489 Circuit Breakers

When using Bulletin 140M or UL489 rated circuit breakers, the guidelines listed below must be followed in order to meet the NEC requirements for branch circuit protection.

- Bulletin 140M can be used in single and group motor applications.
- Bulletin 140M can be used up stream from the drive without the need for fuses.

Table 1.D Minimum Recommended Branch Circuit Protective Devices

Voltage Rating	Drive Rating kW (HP)	Fuse Rating <sup>(1)</sup> Amps	140M <sup>(2) (3)</sup> Catalog No.	Recommended MCS Contactors Catalog No.	Min. Enclosure Volume <sup>(4)</sup> Inches <sup>3</sup>

<sup>(1)</sup> Recommended Fuse Type: UL Class J, RK1, T or Type BS88; 600V (550V) or equivalent.

<sup>(2)</sup> The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers may vary. See <u>Bulletin 140M Motor Protection Circuit Breakers Application Ratings</u>.

<sup>(3)</sup> Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 208 Wye or Delta, 240 Wye or Delta, 480Y/277 or 600Y/347. Not UL listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.

<sup>(4)</sup> When using a Manual Self-Protected (Type E) Combination Motor Controller, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume specified in this column. Application specific thermal considerations may require a larger enclosure.

# **Power Wiring**

**ATTENTION:** National Codes and standards (NEC, VDE, BSI, etc.) and local codes outline provisions for safely installing electrical equipment. Installation must comply with specifications regarding wire types, conductor sizes, branch circuit protection and disconnect devices. Failure to do so may result in personal injury and/or equipment damage.

**ATTENTION:** To avoid a possible shock hazard caused by induced voltages, unused wires in the conduit must be grounded at both ends. For the same reason, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled. This will help minimize the possible shock hazard from "cross coupled" power leads.

### Motor Cable Types Acceptable for 200-600 Volt Installations

#### General

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 meters (1 foot) for every 10 meters (32.8 feet) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than 15 mils (0.4 mm/0.015 in.). Do not route more than three sets of motor leads in a single conduit to minimize "cross talk". If more than three drive/motor connections per conduit are required, shielded cable must be used.

UL installations in 50°C ambient must use 600V, 75°C or 90°C wire. UL installations in 40°C ambient should use 600V, 75°C or 90°C wire. Use copper wire only. Wire gauge requirements and recommendations are based on 75 degree C. Do not reduce wire gauge when using higher temperature wire.

#### Unshielded

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas**. Any wire chosen must have a minimum insulation thickness of 15 mils and should not have large variations in insulation concentricity.

#### Shielded

Location	Rating/Type	Description
Standard (Option 1)	600V, 75°C or 90°C (167°F or 194°F) RHH/RHW-2 Belden 29501-29507 or equivalent	<ul> <li>Four tinned copper conductors with XLPE insulation</li> <li>Foil shield and tinned copper drain wire with 85% braid coverage</li> <li>PVC jacket</li> </ul>
Standard (Option 2)	Tray rated 600V, 75°C or 90°C (167°F or 194°F) RHH/RHW-2 Shawflex 2ACD/3ACD or equivalent	Three tinned copper conductors with XLPE insulation Three tinned copper tape (25% overlap min.) with three bare copper grounds in contact with shield PVC jacket
Class I & II; Division I & II	Tray rated 600V, 75°C or 90°C (167°F or 194°F) RHH/RHW-2	<ul> <li>Three tinned copper conductors with XLPE insulation</li> <li>5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield</li> <li>PVC copper grounds on #10 AWG and smaller</li> </ul>

#### **Reflected Wave Protection**

The drive should be installed as close to the motor as possible. Installations with long motor cables may require the addition of external devices to limit voltage reflections at the motor (reflected wave phenomena). See <u>Table 1.E</u> for recommendations.

The reflected wave data applies to all frequencies 2 to 10 kHz.

For 240V ratings, reflected wave effects do not need to be considered.

Table 1.E Maximum Cable Length Recommendations

Reflected Wave			
380-480V Ratings	Motor Insulation Rating	Motor Cable Only <sup>(1)</sup>	
	1000 Vp-p	15 meters (49 feet)	
	1200 Vp-p	40 meters (131 feet)	
	1600 Vp-p	170 meters (558 feet)	

<sup>(1)</sup> Longer cable lengths can be achieved by installing devices on the output of the drive. Consult factory for recommendations.

# **Output Disconnect**

The drive is intended to be commanded by control input signals that will start and stop the motor. A device that routinely disconnects then reapplies output power to the motor for the purpose of starting and stopping the motor should not be used. If it is necessary to disconnect power to the motor with the drive outputting power, an auxiliary contact should be used to simultaneously disable drive control run commands.

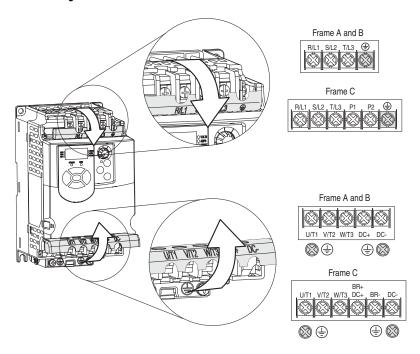

#### **Power Terminal Block**

The drive utilizes a finger guard over the power wiring terminals. To remove:

- 1. Press in and hold the locking tab.
- For the finger guard on the top of the drive, slide it down and out.For the finger guard at the bottom of the drive, slide it up and out.

Replace the finger guard when wiring is complete.

Figure 1.4 Power Terminal Block

Terminal	Description
R/L1, S/L2	1-Phase Input
R/L1, S/L2, T/L3	3-Phase Input
	DC Bus Inductor Connection (Frame C drives only.)
P1 <sup>(1)</sup> , P2 <sup>(1)</sup>	The Frame C drive is shipped with a jumper between Terminals P1 and P2. Remove this jumper only when a DC Bus Inductor will be connected. Drive will not power up without a jumper or inductor connected.

<sup>(1)</sup> For Frame C only [5.5 kW (7.5 HP) ratings and higher].

Table 1.F Power Terminal Block Specifications

Frame	Maximum Wire Size (1)	Minimum Wire Size (1)	Torque
Α	3.3 mm <sup>2</sup> (12 AWG)	0.8 mm <sup>2</sup> (18 AWG)	1.4-1.6 N-m (12-14 lbin.)
В	8.4 mm <sup>2</sup> (8 AWG)	0.8 mm <sup>2</sup> (18 AWG)	1.6-1.9 N-m (14-17 lbin.)
С	13.3 mm <sup>2</sup> (6 AWG)	3.3 mm <sup>2</sup> (12 AWG)	2.7-3.2 N-m (24-28 lbin.)

<sup>(1)</sup> Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

#### Motor Start/Stop Precautions

**ATTENTION:** A contactor or other device that routinely disconnects and reapplies the AC line to the drive to start and stop the motor can cause drive hardware damage. The drive is designed to use control input signals that will start and stop the motor. If used, the input device must not exceed one operation per minute or drive damage can occur.

ATTENTION: The drive start/stop control circuitry includes solid-state components. If hazards due to accidental contact with moving machinery or unintentional flow of liquid, gas or solids exist, an additional hardwired stop circuit may be required to remove the AC line to the drive. When the AC line is removed, there will be a loss of any inherent regenerative braking effect that might be present - the motor will coast to a stop. An auxiliary braking method may be required.

<sup>(2)</sup> Not applicable to 120 V, 1-Phase drives.

# I/O Wiring Recommendations

Important points to remember about I/O wiring:

- · Always use copper wire.
- Wire with an insulation rating of 600V or greater is recommended.
- Control and signal wires should be separated from power wires by at least 0.3 meters (1 foot).

**Important:** I/O terminals labeled "Common" <u>are not</u> referenced to the safety ground (PE) terminal and are designed to greatly reduce common mode interference.

**ATTENTION:** Driving the 4-20mA analog input from a voltage source could cause component damage. Verify proper configuration prior to applying input signals.

#### **Control Wire Types**

Table 1.G Recommended Control and Signal Wire(1)

Wire Type(s)	Description	Minimum Insulation Rating
Belden 8760/9460 (or equiv.)	0.8 mm <sup>2</sup> (18AWG), twisted pair, 100% shield with drain.	300V 60 degrees C (140 degrees F)
Belden 8770 (or equiv.)	0.8 mm <sup>2</sup> (18AWG), 3 conductor, shielded for remote pot only.	

<sup>(1)</sup> If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

#### I/O Terminal Block

Table 1.H I/O Terminal Block Specifications

Maximum Wire Size (1)	Minimum Wire Size (1)	Torque
1.3 mm <sup>2</sup> (16 AWG)	0.2 mm <sup>2</sup> (24 AWG)	0.5-0.8 N-m (4.4-7 lbin.)

<sup>(1)</sup> Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

#### **Maximum Control Wire Recommendations**

Do not exceed control wiring length of 30 meters (100 feet). Control signal cable length is highly dependent on electrical environment and installation practices. To improve noise immunity, the I/O terminal block Common must be connected to ground terminal/protective earth. If using the RS485 (DSI) port, I/O Terminal 16 should also be connected to ground terminal/protective earth.

Potentiometer

must be

1-10k ohm

2 Watt Min.

Figure 1.5 Control Wiring Block Diagram

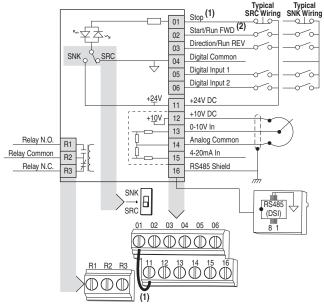

(1) Important: I/O Terminal 01 is always a coast to stop input except when P106 [Start Source] is set to "3-Wire" control. In three wire control, I/O Terminal 01 is controlled by P107 [Stop Mode]. All other stop sources are controlled by P107 [Stop Mode].

Important: The drive is shipped with a jumper installed between I/O Terminals 01 and 11. Remove this jumper when using I/O Terminal 01 as a stop or enable input.

(2) Two wire control shown. For three wire control use a momentary input on I/O Terminal 02 to command a start. Use a maintained input of for I/O Terminal 03 to change direction.

P106 [Start Source]	Stop	I/O Terminal 01 Stop
Keypad	Per P107	Coast
3-Wire	Per P107	Per P107
2-Wire	Per P107	Coast
RS485 Port	Per P107	Coast

	30V DC	125V AC	240V AC
Resistive	3.0A	3.0A	3.0A
Inductive	0.5A	0.5A	0.5A

No. Signal		Default	Description	Param.
R1	Relay N.O.	Fault	Normally open contact for output relay.	<u>t221</u>
R2	Relay Common	-	Common for output relay.	
R3	Relay N.C.	Fault	Normally closed contact for output relay.	t221
Sink/	Source DIP Switch	Source (SRC)	Inputs can be wired as Sink (SNK) or Source (SRC) via E setting.	IP Switch
01	Stop (1)	Coast	The factory installed jumper or a normally closed input must be present for the drive to start.	P106 (1)
02	Start/Run FWD	Not Active	Command comes from the integral keypad by default. To	P106, P107
03	Direction/Run REV	Not Active	disable reverse operation, see A095 [Reverse Disable].	P106, P107 A434
04	Digital Common	-	For digital inputs. Electronically isolated with digital inputs from analog I/O.	
05	Digital Input 1	Preset Freq	Program with t201 [Digital In1 Sel].	<u>t201</u>
06	Digital Input 2	Preset Freq	Program with t202 [Digital In2 Sel].	<u>t202</u>
11	+24V DC	-	Drive supplied power for digital inputs.  Maximum output current is 100mA.	

No. Signal		Default	Description	Param.	
12	+10V DC	-	Drive supplied power for 0-10V external potentiometer. Maximum output current is 15mA.	<u>P108</u>	
13	0-10V In <sup>(3)</sup>	Not Active	For external 0-10V input supply (input impedance = 100k ohm) or potentiometer wiper.	<u>P108</u>	
14	Analog Common	-	For 0-10V In or 4-20mA In. Electronically isolated with analog inputs from digital I/O.		
15	4-20mA In <sup>(3)</sup>	Not Active	For external 4-20mA input supply (input impedance = 250 ohm).	<u>P108</u>	
16	RS485 (DSI) Shield	-	Terminal should be connected to safety ground - PE when using the RS485 (DSI) communications port.		

<sup>(3)</sup> Only one analog frequency source may be connected at a time. If more than one reference is connected at the same time, an undetermined frequency reference will result.

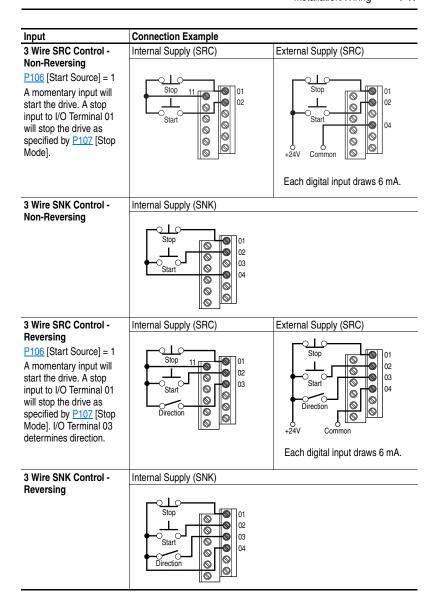

### I/O Wiring Examples

I/O wiring Examples					
Input	Connection Example				
Potentiometer	P108 [Speed Reference] = 2 "0-10V Input"				
1-10k Ohm Pot. Recommended (2 Watt minimum)	12 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0				
Analog Input	Voltage Current				
0 to +10V, 100k ohm impedance	P108 [Speed Reference] = 2 "0-10V P108 [Speed Reference] = 3				
4-20 mA, 100 ohm impedance	Common 114				
Analog Input, PTC	Wire the PTC and External Resistor (typically matched to the PTC Hot				
For Drive Fault	Resistance) to I/O Terminals 12, 13, 14.				
	Wire R2/R3 Relay Output (SRC) to I/O Terminals 5 & 11.				
	t201 [Digital In1 Sel] = 3 "Aux Fault" t221 [Relay Out Sel] = 10 "Above Anlg V"				
	t222 [Relay Out Ser] = 10 Above Arrig V				
	Repto (hot) = $\sqrt{\frac{R_2}{R_{PTC}}}$ (hot) + $R_e$ × 100				

#### Input Connection Example 2 Wire SRC Control -Internal Supply (SRC) External Supply (SRC) Non-Reversing P106 [Start Source] = 2.3 or 4 02 0 0 Stop-Run 0 0 Input must be active for 0 0 Stop-Run 0 nΛ the drive to run. When 0 0 0 0 input is opened, the drive 0 0 0 will stop as specified by Common 0 P107 [Stop Mode]. If desired, a User Supplied Each digital input draws 6 mA. 24V DC power source can be used. Refer to the "External Supply (SRC)" example. 2 Wire SNK Control -Internal Supply (SNK) Non-Reversing 01 02 0 Stop-Run 0 0 04 0 0 0 0 2 Wire SRC Control -Internal Supply (SRC) External Supply (SRC) Run FWD/Run REV P106 [Start Source] = 2, 3 01 01 02 or 4 02 Stop-Run 03 03 Input must be active for Forward Stop-Run 0 04 the drive to run. When Forward 0 0 Stop-Run Reverse 0 0 input is opened, the drive 0 will stop as specified by Stop-Run Reverse P107 [Stop Mode]. +24V Common If both Run Forward and Run Reverse inputs are Each digital input draws 6 mA. closed at the same time. an undetermined state could occur. 2 Wire SNK Control -Internal Supply (SNK) Run FWD/Run REV 01 02 Stop-Run 0 03 Forward 0 04 0 Stop-Run

0

Reverse

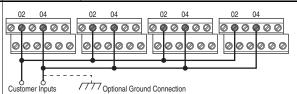

#### **Typical Multiple Drive Connection Examples**

# Input Multiple Digital Input Connections

Customer Inputs can be wired per External Supply (SRC) examples on page 1-16.

#### Connection Example

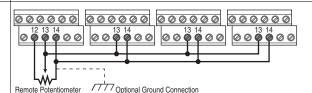

When connecting a single input such as Run, Stop, Reverse or Preset Speeds to multiple drives, it is important to connect I/O Terminal 04 common together for all drives. If they are to be tied into another common (such as earth ground or separate apparatus ground) only one point of the daisy chain of I/O Terminal 04 should be connected.

**ATTENTION:** Digital inputs on multiple drives should <u>not</u> be tied together when using SNK (Internal Supply) mode. In SNK mode, if power is removed from one drive, inadvertent operation of other drives that share the same I/O Common connection may occur.

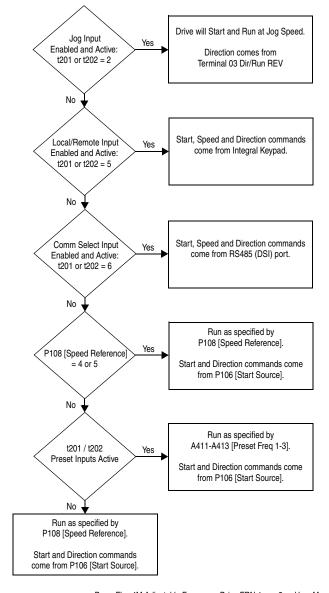

#### Multiple Analog Connections

When connecting a single potentiometer to multiple drives it is important to connect I/O Terminal 14 common together for all drives. I/O Terminal 14 common and I/O Terminal 13 (potentiometer wiper) should be daisy-chained to each drive. All drives must be powered up for the analog signal to be read correctly.

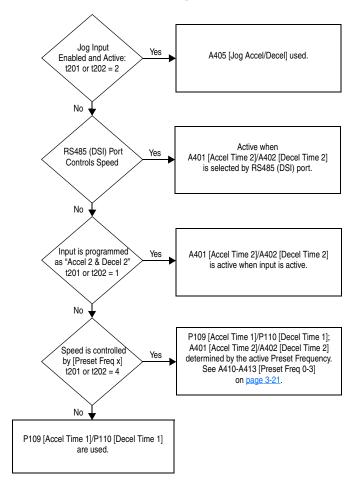

# **Start and Speed Reference Control**

The drive speed command can be obtained from a number of different sources. The source is normally determined by P108 [Speed Reference]. However, when t201 or t202 Digital Inx Sel is set to option 2, 4, 5 or 6, and the digital input is active, t201 or t202 will override the speed reference commanded by P108 [Speed Reference]. See the chart below for the override priority.

#### **Accel/Decel Selection**

The selection of Accel/Decel rates can be made through digital inputs, RS485 (DSI) communications and/or parameters.

#### **EMC Instructions**

#### **CE Conformity**

Conformity with the Low Voltage (LV) Directive and Electromagnetic Compatibility (EMC) Directive has been demonstrated using harmonized European Norm (EN) standards published in the Official Journal of the European Communities. PowerFlex Drives comply with the EN standards listed below when installed according to the User Manual.

CE Declarations of Conformity are available online at: http://www.ab.com/certification/ce/docs.

#### Low Voltage Directive (73/23/EEC)

• EN50178 Electronic equipment for use in power installations

#### EMC Directive (89/336/EEC)

• EN61800-3 Adjustable speed electrical power drive systems Part 3: EMC product standard including specific test methods.

#### **General Notes**

- The motor cable should be kept as short as possible in order to avoid electromagnetic emission as well as capacitive currents.
- Use of line filters in ungrounded systems is not recommended.
- Conformity of the drive with CE EMC requirements does not guarantee an entire machine installation complies with CE EMC requirements. Many factors can influence total machine/installation compliance.

#### **Essential Requirements for CE Compliance**

Conditions 1-3 listed below **must be** satisfied for PowerFlex drives to meet the requirements of **EN61800-3**.

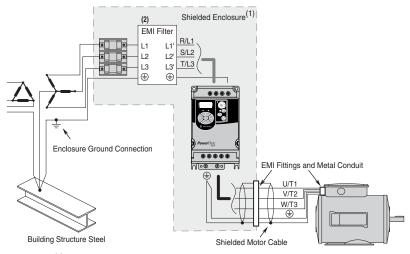

- 1. Grounding as described in Figure 1.6. Refer to page 1-6 for additional grounding recommendations.
- Output power, control (I/O) and signal wiring must be braided, shielded cable with a coverage of 75% or better, metal conduit or equivalent attenuation.
- 3. Allowable cable length in <u>Table 1.1</u> is not exceeded.

Table 1.I Allowable Cable Length

Filter Type	EN61800-3 Second Environment	EN61800-3 First Environment Restricted Distribution <sup>(2)</sup>	EN61800-3 First Environment Unrestricted Distribution <sup>(3)</sup>
Integral, 240V	5 meters (16 feet)	5 meters (16 feet)	1 meter (3 feet)
Integral, 480V	10 meters (33 feet)	-	-
External - S Type <sup>(1)</sup>		5 meters (16 feet)	1 meter (3 feet)
External - L Type <sup>(1)</sup>	100 meters (328 feet)	100 meters (328 feet)	25 meters (82 feet)

<sup>(1)</sup> Refer to Appendix B for details on optional external filters.

Figure 1.6 Connections and Grounding

- (1) First Environment Unrestricted Distribution installations require a shielded enclosure. Keep wire length as short as possible between the enclosure entry point and the EMI filter.
- (2) Integral EMI filters are available on 240V, 1-Phase drives and 380V, 3-Phase drives.

<sup>(2)</sup> Equivalent to EN55011 Class A.

<sup>(3)</sup> Equivalent to EN55011 Class B.

#### EN61000-3-2

- 0.75 kW (1 HP) 240V 1-Phase and 3-Phase drives and 0.4 kW (0.5 HP) 240V 1-Phase drives are suitable for installation on a private low voltage power network. Installations on a public low voltage power network may require additional external harmonic mitigation.
- Other drive ratings meet the current harmonic requirements of EN61000-3-2 without additional external mitigation.

Notes:

# Start Up

This chapter describes how to start up the PowerFlex 4M Drive. To simplify drive setup, the most commonly programmed parameters are organized in a single Basic Program Group.

Important: Read the General Precautions section before proceeding.

ATTENTION: Power must be applied to the drive to perform the following start-up procedures. Some of the voltages present are at incoming line potential. To avoid electric shock hazard or damage to equipment, only qualified service personnel should perform the following procedure. Thoroughly read and understand the procedure before beginning. If an event does not occur while performing this procedure, **Do Not Proceed. Remove All Power** including user supplied control voltages. User supplied voltages may exist even when main AC power is not applied to the drive. Correct the malfunction before continuing.

# **Prepare For Drive Start-Up**

#### **Before Applying Power to the Drive**

1.	Confirm that all inputs are connected to the correct terminals and are secure.		
2.	Verify that AC line power at the disconnect device is within the rated value of the drive.		
3.	Verify that any digital control power is 24 volts.		
4.	<b>4.</b> Verify that the Sink (SNK)/Source (SRC) Setup DIP Switch is set match your control wiring scheme. See Figure 1.5 on page 1-14 for location.		
Im	aportant: The default control scheme is Source (SRC). The Stop terminal is jumpered (I/O Terminals 01 and 11) to allow starting from the keypad. If the control scheme is changed to Sink (SNK), the jumper must be removed from I/O Terminals 01 and 11 and installed between I/O Terminals 01 and 04.		
5.	Verify that the Stop input is present or the drive will not start.		
Im	mortant. If I/O Terminal 01 is used as a ston input, the jumper		

between I/O Terminals 01 and 11 must be removed.

#### **Applying Power to the Drive**

┙ 6.	Apply AC	power and	control	voltages	to the drive
------	----------	-----------	---------	----------	--------------

☐ 7. Familiarize yourself with the integral keypad features (see page 2-3) before setting any Program Group parameters.

#### Start, Stop, Direction and Speed Control

Factory default parameter values allow the drive to be controlled from the integral keypad. No programming is required to start, stop, change direction and control speed directly from the integral keypad.

**Important:** To disable reverse operation, see A434 [Reverse Disable].

If a fault appears on power up, refer to <u>Fault Descriptions on page 4-3</u> for an explanation of the fault code.

#### Variable Torque Fan/Pump Applications

For improved motor tuning performance when using a premium efficient motor on a variable torque load, set <u>A453</u> [Boost Select] to option 2 "35.0. VT".

# Integral Keypad

Menu	Description	
d	Display Group (View Only) Consists of commonly viewed drive operating conditions.	RUNO PWDO REVO
P	Basic Program Group Consists of most commonly used programmable functions.	PROGRAM FAULT
٢	Terminal Block Group Consists of programmable functions for control terminals.	Esc (Sel)
	Communications Group Consists of programmable functions for communications.	
R	Advanced Program Group Consists of remaining programmable functions.	
F	Fault Designator Consists of list of codes for specific fault conditions. Displayed only when fault is present.	

Na	LED	LED State	Description
_			Description
0	Run/Direction	Steady Red	Indicates drive is running and commanded motor direction.
	Status	Flashing Red	Drive has been commanded to change direction. Indicates actual motor direction while decelerating to zero.
0	Alphanumeric	Steady Red	Indicates parameter number, parameter value, or fault code.
	Display	Flashing Red	Single digit flashing indicates that digit can be edited. All digits flashing indicates a fault condition.
8	Displayed Units	Steady Red	Indicates the units of the parameter value being displayed.
4	Program Status	Steady Red	Indicates parameter value can be changed.
0	Fault Status	Flashing Red	Indicates drive is faulted.
6	Pot Status	Steady Green	Indicates potentiometer on Integral Keypad is active.
0	Start Key Status	Steady Green	Indicates Start key on Integral Keypad is active. The Reverse key is also active unless disabled by A434 [Reverse Disable].
No.	Key	Name	Description
3	Esc	Escape	Back one step in programming menu. Cancel a change to a parameter value and exit Program Mode.
	Sel	Select	Advance one step in programming menu. Select a digit when viewing parameter value.
		Up Arrow	Scroll through groups and parameters. Increase/decrease the value of a flashing digit.
	<b>(</b>	Down Arrow	
	<b>(1)</b>	Enter	Advance one step in programming menu. Save a change to a parameter value.

No.	LED	LED State	Description
Speed Potentiometer Used to control speed of drive. Defau Controlled by parameter P108 [Speed		Used to control speed of drive. Default is active. Controlled by parameter P108 [Speed Reference].	
	Start		Used to start the drive. Default is active. Controlled by parameter P106 [Start Source].
		Reverse	Used to reverse direction of the drive. Default is active. Controlled by parameters P106 [Start Source] and A434 [Reverse Disable].
	0	Stop	Used to stop the drive or clear a fault. This key is always active. Controlled by parameter P107 [Stop Mode].

## **Viewing and Editing Parameters**

The last user-selected Display Group parameter is saved when power is removed and is displayed by default when power is reapplied.

The following is an example of basic integral keypad and display functions. This example provides basic navigation instructions and illustrates how to program the first Program Group parameter.

Ste	ep	Key(s)	Example Displays
1.	When power is applied, the last user-selected Display Group parameter number is briefly displayed with flashing characters. The display then defaults to that parameter's current value. (Example shows the value of d001 [Output Freq] with the drive stopped.)		PROGRAM FAULT
2.	Press Esc once to display the Display Group parameter number shown on power-up. The parameter number will flash.	Esc	PROGRAM FAULT O VOLTS O AMPS O HERTZ
3.	Press Esc again to enter the group menu. The group menu letter will flash.	Esc	PROGRAM FAULT  PROGRAM FAULT
4.	Press the Up Arrow or Down Arrow to scroll through the group menu (d, P, t, C and A).	or v	PROGRAM FAULT O HERTZ
	Press Enter or Sel to enter a group. The rightmost digit of the last viewed parameter in that group will flash.	or Sel	PROGRAM FAULT TO MERTZ
5.	Press the Up Arrow or Down Arrow to scroll through the parameters in the group.	or v	

St	en	Key(s)	Example Displays
	Press Enter or Sel to view the value of a	(S)	• volts
0.	parameter. If you do not want to edit the value, press Esc to return to the parameter number.	or Sel	PROGRAM FAULT
7.	Press Enter or Sel to enter program mode to edit the parameter value. The rightmost digit will flash and the Program LED will illuminate if the parameter can be edited.	or Sel	PROGRAM FAULT O HERTZ
8.	Press the Up Arrow or Down Arrow to change the parameter value.	or V	
	If desired, press Sel to move from digit to digit or bit to bit. The digit or bit that you can change will flash.	Sel	PROGRAM FAULT
9.	Press Esc to cancel a change. The digit will stop flashing, the previous value is restored and the Program LED will turn off.	Esc	PROGRAM FAULT
	Or		
	Press Enter to save a change. The digit will stop flashing and the Program LED will turn off.	<b>(</b>	PROGRAM FAULT  PROGRAM FAULT  O
10	Press Esc to return to the parameter list.	Esc	PROGRAM FAULT O HERTZ
	Continue to press Esc to back out of the programming menu.		
	If pressing Esc does not change the display, then d001 [Output Frequency] is displayed. Press Enter or Sel to enter the group menu again.		

The Basic Program Group (page 3-8) contains the most commonly changed parameters.

Notes:

# **Programming and Parameters**

Chapter 3 provides a complete listing and description of the PowerFlex 4M parameters. Parameters are programmed (viewed/edited) using the integral keypad. As an alternative, programming can also be performed using DriveExplorer<sup>TM</sup> or DriveExecutive<sup>TM</sup> software, a personal computer and a serial converter module. Refer to Appendix B for catalog numbers.

Advanced Program Group	3-19
Parameter Cross Reference – by Name	<u>3-31</u>

#### **About Parameters**

To configure a drive to operate in a specific way, drive parameters may have to be set. Three types of parameters exist:

#### ENUM

ENUM parameters allow a selection from 2 or more items. Each item is represented by a number.

#### Numeric Parameters

These parameters have a single numerical value (i.e. 0.1 Volts).

#### Bit Parameters

Bit parameters have four individual bits associated with features or conditions. If the bit is 0, the feature is off or the condition is false. If the bit is 1, the feature is on or the condition is true.

Some parameters are marked as follows.

32 bit parameter. Parameters marked 32 bit will have two parameter numbers when using RS485 communications and programming software.

### **Display Group**

### d001 [Output Freq]

Related Parameter(s): <u>d002</u>, <u>d010</u>, <u>P104</u>, <u>P105</u>, <u>P108</u>

Output frequency present at T1, T2 & T3 (U, V & W).

Values	Default	Read Only
	Min/Max:	0.0/P105 [Maximum Freq]
	Display:	0.1 Hz

#### d002 [Commanded Freq]

Related Parameter(s): <u>d001</u>, <u>d013</u>, <u>P104</u>, <u>P105</u>, <u>P108</u>

Value of the active frequency command. Displays the commanded frequency even if the drive is not running.

Important: The frequency command can come from a number of sources. Refer to <u>Start and Speed</u> <u>Reference Control on page 1-19</u> for details.

Values	Default	Read Only
	Min/Max:	0.0/ <u>P105</u> [Maximum Freq]
	Display:	0.1 Hz

#### d003 [Output Current]

The output current present at T1, T2 & T3 (U, V & W).

	•	,
Values	Default	Read Only
	Min/Max:	0.00/(Drive Rated Amps × 2)
	Display:	0.01 Amps

### d004 [Output Voltage]

Related Parameter(s): P101, A453, A457

Output voltage present at terminals T1, T2 & T3 (U, V & W).

Values	Default	Read Only
	Min/Max:	0/Drive Rated Volts
	Display:	0.1 VAC

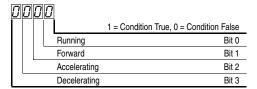

#### d005 [DC Bus Voltage]

Present DC bus voltage level.

Values Default		Read Only
	Min/Max:	Based on Drive Rating
	Display:	1 VDC

#### d006 [Drive Status]

Present operating condition of the drive.

Values	Default	Read Only
	Min/Max:	0/1
	Display:	1

### d007 [Fault 1 Code] d008 [Fault 2 Code] d009 [Fault 3 Code]

A code that represents a drive fault. The codes will appear in these parameters in the order they occur (d007 [Fault 1 Code] = the most recent fault). Repetitive faults will only be recorded once.

Refer to Chapter 4 for fault code descriptions.

Values	Default	Read Only
	Min/Max:	F2/F122
	Display:	F1

### d010 [Process Display]

Related Parameter(s): <u>d001</u>, <u>A440</u>, <u>A438</u>, <u>A439</u>

Related Parameter(s): A434

The output frequency scaled by  $\underline{A440}$  [Process Factor] or by  $\underline{A438}$  [Process Time Lo] and  $\underline{A439}$  [Process Time Hi].

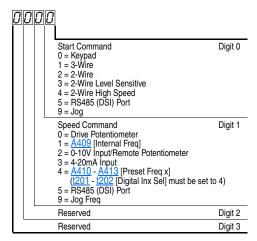

Output x Process Freq x Process Display

Values	Default	Read Only
	Min/Max:	0.00/9999
	Display:	0.01 – 1

#### d012 [Control Source]

Related Parameter(s): P106, P108, t201, t202

Displays the active source of the Start Command and Speed Command which are normally defined by the settings of P106 [Start Source] and P108 [Speed Reference] but may be overridden by digital inputs. Refer to the flowcharts on pages 1-19 and 1-20 for details.

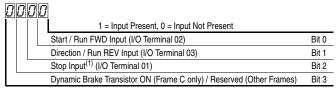

Values	Default	Read Only
	Min/Max:	0/9
	Display:	1

### d013 [Contrl In Status]

Related Parameter(s): d002, P104, P105

Status of the control terminal block control inputs.

**Important:** Actual control commands may come from a source other than the control terminal block.

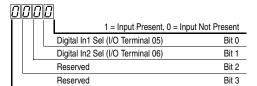

(1) The stop input must be present in order to start the drive. When this bit is a 1 the drive can be started. When this bit is a 0 the drive will stop.

Values	Default	Read Only
	Min/Max:	0/1
	Display:	1

### d014 [Dig In Status]

Status of the control terminal block digital inputs.

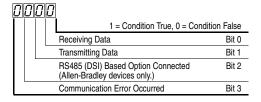

Values	Default	Read Only
	Min/Max:	0/1
	Display:	1

Related Parameter(s): t201, t202

Related Parameter(s): C302 - C306

### d015 [Comm Status]

Status of the communications ports.

Values	Default	Read Only
	Min/Max:	0/1
	Display:	1

### d016 [Control SW Ver]

Main Control Board software version.

Values	Default	Read Only
	Min/Max:	1.00/99.99
	Display:	0.01

### d017 [Drive Type]

Used by Rockwell Automation field service personnel.

Values	Default	Read Only	
	Min/Max:	1001/9999	
	Display:	1	

#### d018 [Elapsed Run Time]

Accumulated time drive is outputting power. Time is displayed in 10-hour increments.

Values	Default	Read Only
	Min/Max:	0/9999 Hrs
	Display:	1 (= 10 Hrs)

#### d019 [Testpoint Data]

Related Parameter(s): A459

The present value of the function selected in A459 [Testpoint Sel].

Values	Default	Read Only
	Min/Max:	0/FFFF
	Display:	1 Hex

### d020 [Analog In 0-10V]

Related Parameter(s): t211, t212

The present value of the voltage at I/O Terminal 13 (100.0% = 10 volts).

Values	Default	Read Only
	Min/Max:	0.0/100.0%
	Display:	0.1%

### d021 [Analog In 4-20mA]

Related Parameter(s): t213, t214

The present value of the current at I/O Terminal 15 (0.0% = 4mA, 100.0% = 20mA).

Values	Default	Read Only
	Min/Max:	0.0/100.0%
Display: 0.		0.1%

### d022 [Drive Temp]

Present operating temperature of the drive power section.

Values	Default	Read Only
	Min/Max:	0/120 degC
	Display:	1 degC

### **Basic Program Group**

#### P101 [Motor NP Volts]

Related Parameter(s): d004, A453

Stop drive before changing this parameter.

Set to the motor nameplate rated voltage.

Values	Default	Based on Drive Rating
	Min/Max:	20/Drive Rated Voltage
	Display:	1 VAC

#### P102 [Motor NP Hertz]

Related Parameter(s): A453, A444

001 10 1110	cor to the motor nameplate rated hequency.		
Values	Default	60 Hz	

Display: 1 Hz

### P103 [Motor OL Current]

Min/Max:

Related Parameter(s): P111, t221, A441, A444, A448, A437

Set to the maximum allowable motor current.

The drive will fault on an F7 Motor Overload if the value of this parameter is exceeded by 150% for 60 seconds or 200% for 3 seconds.

10/400 Hz

Values	Default	Based on Drive Rating
	Min/Max:	0.0/(Drive Rated Amps × 2)
	Display:	0.1 Amps

#### P104 [Minimum Freq] Related Parameter(s): d001, d002, d013, P105, t211, t213, A438

Sets the lowest frequency the drive will output continuously.

Values	Default	0.0 Hz
	Min/Max:	0.0/400.0 Hz
	Display:	0.1 Hz

#### P105 [Maximum Freq]

Related Parameter(s): d001, d002, d013, P104, A404, t212 t214 A438

Stop drive before changing this parameter.

Sets the highest frequency the drive will output.

Values	Default	60 Hz
	Min/Max:	0/400 Hz
	Display:	1 Hz

#### P106 [Start Source]

Related Parameter(s): d012, P107

Stop drive before changing this parameter.

Sets the control scheme used to start the drive.

Refer to Start and Speed Reference Control on page 1-19 for details about how other drive settings can override the setting of this parameter.

**Important:** For all settings except option 3, the drive must receive a leading edge from the start input for the drive to start after a stop input, loss of power or fault condition.

Options	0	"Keypad" (Default)	<ul> <li>Integral keypad controls drive operation.</li> <li>I/O Terminal 1 "Stop" = coast to stop.</li> <li>When active, the Reverse key is also active unless disabled by A434 [Reverse Disable].</li> </ul>
	1	"3-Wire"	I/O Terminal 1 "Stop" = stop according to the value set in P107 [Stop Mode].
	2	"2-Wire"	I/O Terminal 1 "Stop" = coast to stop.
	3	"2-W Lvl Sens"	Drive will restart after a "Stop" command when:  Stop is removed and  Start is held active

**ATTENTION:** Hazard of injury exists due to unintended operation. When P106 [Start Source] is set to option 3, and the Run input is maintained, the Run inputs do not need to be toggled after a Stop input for the drive to run again. A Stop function is provided only when the Stop input is active (open).

4	"2-W Hi Speed"	<b>Important:</b> There is greater potential voltage on the output terminals when using this option.	
		<ul> <li>Outputs are kept in a ready-to-run state. The drive will respond to a "Start" command within 10 ms.</li> <li>I/O Terminal 1 "Stop" = coast to stop.</li> </ul>	
5	"Comm Port"(1)	<ul> <li>Remote communications. Refer to <u>Appendix C</u> for details.</li> <li>I/O Terminal 1 "Stop" = coast to stop.</li> </ul>	

When using option 5 "Comm Port", if the drive is using a network for control and the user's program is maintaining a "Start" or "Jog" command without sending a "Stop command", the drive will start automatically when power is cycled.

### P107 [Stop Mode]

Related Parameter(s): P106, A418, A425, A427, C304

Active stop mode for all stop sources [e.g. keypad, run forward (I/O Terminal 02), run reverse (I/O Terminal 03), RS485 port] except as noted below.

Important: I/O Terminal 01 is always a coast to stop input except when P106 [Start Source] is set for "3-Wire" control. When in three wire control, I/O Terminal 01 is controlled by P107 [Stop Mode].

Options	0	"Ramp, CF" <sup>(1)</sup> (Default)	Ramp to Stop. "Stop" command clears active fault.
	1	"Coast, CF"(1)	Coast to Stop. "Stop" command clears active fault.
	2	"DC Brake, CF"(1)	DC Injection Braking Stop. "Stop" command clears active fault.
	3	"DCBrkAuto,CF"(1)	DC Injection Braking Stop with Auto Shutoff.
			<ul> <li>Standard DC Injection Braking for value set in A424 [DC Brake Time].</li> <li>OR</li> </ul>
			<ul> <li>Drive shuts off if the drive detects that the motor is stopped.</li> </ul>
			"Stop" command clears active fault.
	4	"Ramp"	Ramp to Stop.
	5	"Coast"	Coast to Stop.
	6	"DC Brake"	DC Injection Braking Stop.
	7	"DC BrakeAuto"	DC Injection Braking Stop with Auto Shutoff.
			Standard DC Injection Braking for value set in A424 [DC Brake Time].  OR
			Drive shuts off if current limit is exceeded.

<sup>(1)</sup> Stop input also clears active fault.

P108 [Speed Reference] Related Parameter(s): <u>d001</u>, <u>d002</u>, <u>d012</u>, <u>P109</u>, <u>P110</u>, <u>1201</u>, <u>1202</u>, <u>A409</u>, <u>A410</u>-A413, <u>1211</u>, <u>1212</u>, <u>1213</u>, <u>1214</u>

Sets the source of the speed reference to the drive.

The drive speed command can be obtained from a number of different sources. The source is normally determined by P108 [Speed Reference]. However, when t201 - t202 [Digital Inx Sel] is set to option 2, 4, 5, 6, 11, 12, 13, 14 and the digital input is active, the speed reference commanded by P108 [Speed Reference] will be overridden. Refer to the flowchart on page 1-19 for more information on speed reference control priority.

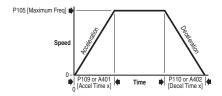

Options	0	"Drive Pot" (Default)	Internal frequency command from the potentiometer on the integral keypad.
	1	"InternalFreq"	Internal frequency command from A409 [Internal Freq].
	2	"0-10V Input"	External frequency command from the 0-10V analog input or remote potentiometer.
	3	"4-20mA Input"	External frequency command from the 4-20mA analog input.
	4	"Preset Freq"	External frequency command as defined by A410 - A413 [Preset Freq x] when t201 and t202 [Digital Inx Sel] are programmed as "Preset Frequencies" and the digital inputs are active.
	5	"Comm Port"	External frequency command from the communications port.

#### P109 [Accel Time 1]

Related Parameter(s): P108, P110, t201, t202, A401, A410-A413

Sets the rate of acceleration for all speed increases.

Values	Default	10.0 Secs
	Min/Max:	0.0/600.0 Secs
	Display:	0.1 Secs

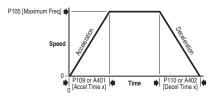

### P110 [Decel Time 1]

Related Parameter(s): P108, P109, t201, t202, A402, A410-A413

Sets the rate of deceleration for all speed decreases.

Maximum Freq = Decel Rate Decel Time

Values	Default	10.0 Secs
	Min/Max:	0.1/600.0 Secs
	Display:	0.1 Secs

#### P111 [Motor OL Ret]

Related Parameter(s): P103

Enables/disables the Motor Overload Retention function. When Enabled, the value held in the motor overload counter is saved at power-down and restored at power-up. A change to this parameter setting resets the counter.

**Options** 0 "Disabled" (Default)

"Enabled"

### P112 [Reset To Defalts]

Stop drive before changing this parameter.

Resets all parameter values to factory defaults.

#### **Options** 0 "Idle State" (Default)

"Reset Defaults"

- After the reset function is complete, this parameter will set itself back to "0".
- Causes an F48 Params Defaulted fault.

### **Terminal Block Group**

t201 [Digital In1 Sel] (I/O Terminal 5)

t202 [Digital In2 Sel]
(I/O Terminal 6)

Related Parameter(s): d012, d014, P108, P109, P110, t211-t214, A401, A402, A404, A405, A410-A413

Stop drive before changing this parameter.

Selects the function for the digital inputs. Refer to the flowchart on page 1-19 for more information on speed reference control priority.

Options	0	"Not Used"	Terminal has no function but can be read over network communications via d014 [Dig In Status]
	1	"Acc 2 & Dec 2"	When active, <u>A401</u> [Accel Time 2] and <u>A402</u> [Decel Time 2] are used for all ramp rates except Jog.
			Can only be tied to one input.
			Refer to the flowchart on page 1-20 for more information on Accel/Decel selection.
	2	"Jog"	When input is present, drive accelerates according to the value set in <u>A405</u> [Jog Accel/Decel] and ramps to the value set in <u>A404</u> [Jog Frequency].
			When input is removed, drive ramps to a stop according to the value set in <u>A405</u> [Jog Accel/Decel].
			A valid "Start" command will override this input.
	3	"Aux Fault"	When enabled, an F2 $\underline{\text{Auxiliary Input}}$ fault will occur when the input is removed.
	4	"Preset Freq" (Default)	Refer to A410 - A413 [Preset Freq x].
			Important: Digital Inputs have priority for frequency control when programmed as a Preset Speed and are active. Refer to the flowchart on 1-19 for more information on speed reference control priority.
	5	"Local"	When active, sets integral keypad as start source and potentiometer on the integral keypad as speed source.
	6	"Comm Port"	When active, sets communications device as default start/ speed command source.
			Can only be tied to one input.
	7	"Clear Fault"	When active, clears an active fault.
	8	"RampStop,CF"	Causes drive to immediately ramp to a stop regardless of how ${ t P107}$ [Stop Mode] is set.
	9	"CoastStop,CF"	Causes drive to immediately coast to a stop regardless of how P107 [Stop Mode] is set.
	10	"DCInjStop,CF"	Causes drive to immediately begin a DC Injection stop regardless of how P107 [Stop Mode] is set.
	11	"Jog Forward"	Drive accelerates to A404 [Jog Frequency] according to A405 [Jog Accel/Decel] and ramps to stop when input becomes inactive. A valid start will override this command.
	12	"Jog Reverse"	Drive accelerates to A404 [Jog Frequency] according to A405 [Jog Accel/Decel] and ramps to stop when input becomes inactive. A valid start will override this command.

t201 & t202 Options (Cont.)	13 "10V In Ctrl"	Selects 0-10V or ±10V control as the frequency reference. Start source is not changed.
	<b>14</b> "20mA In Ctrl"	Selects 4-20mA control as the frequency reference. Start source is not changed.
	15 "Anlg Invert"	Inverts the scaling of the analog input levels set in t211 [Anlg In 0-10V Lo] and t212 [Anlg In 0-10V Hi] or t213 [Anlg In4-20mA Lo] and t214 [Anlg In4-20mA Hi].
	16-27	Reserved

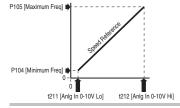

#### t211 [Anlg In 0-10V Lo]

Related Parameter(s): d020, P104, P108, t201, t202

Sets the analog input level that corresponds to P104 [Minimum Freq] if a 0-10V input is used by P108 [Speed Reference].

Analog inversion can be accomplished by setting this value larger than <u>1212</u> [Anlg In 0-10V Hi] or by setting <u>1201</u> - <u>1202</u> [Digital Inx Sel] to option 15 "Anlg Invert".

Values	Default	0.0%
	Min/Max:	0.0/100.0%
	Display:	0.1%

#### t212 [Anlg In 0-10V Hi]

Related Parameter(s): <u>d020</u>, <u>P105</u>, <u>P108</u>, <u>t201</u>, <u>t202</u>

Sets the analog input level that corresponds to P105 [Maximum Freq] if a 0-10V input is used by P108 [Speed Reference].

Analog inversion can be accomplished by setting this value smaller than <u>t211</u> [Anlg In 0-10V Lo] or by setting <u>t201</u> - <u>t202</u> [Digital Inx Sel] to option 15 "Anlg Invert".

Values	Default	100.0%
	Min/Max:	0.0/100.0%
	Display:	0.1%

### t213 [Anig In4-20mA Lo]

Related Parameter(s): d021, P104, P108, t201, t202

Sets the analog input level that corresponds to P104 [Minimum Freq] if a 4-20mA input is used by P108 [Speed Reference].

Analog inversion can be accomplished by setting this value larger than <u>1214</u> [Anlg In4-20mA Hi] or by setting <u>1201</u> - <u>1202</u> [Digital Inx Sel] to option 15 "Anlg Invert".

Values	Default	0.0%
	Min/Max:	0.0/100.0%
	Display:	0.1%

### **Terminal Block Group** (continued)

#### t214 [Anlg In4-20mA Hi]

Related Parameter(s): <u>d021</u>, <u>P105</u>, <u>P108</u>, <u>t201</u>, <u>t202</u>

Sets the analog input level that corresponds to P105 [Maximum Freq] if a 4-20mA input is used by P108 [Speed Reference].

Analog inversion can be accomplished by setting this value smaller than <u>1213</u> [Anlg In4-20mA Lo] or by setting <u>1201</u> - <u>1202</u> [Digital Inx Sel] to option 15 "Anlg Invert".

Values	Default	100.0%
	Min/Max:	0.0/100.0%
	Display:	0.1%

### t221 [Relay Out Sel]

Related Parameter(s): P103, t222, A451

Sets the condition that changes the state of the output relay contacts.

1 "At Frequency" Drive reaches commanded frequency. 2 "MotorRunning" Motor is receiving power from the drive. 3 "Reverse" Drive is commanded to run in reverse direction. 4 "Motor Overld" Motor overload condition exists. 5 "Ramp Reg" Ramp regulator is modifying the programmed accel/decel times to avoid an overcurrent or overvoltage fault from occurring. 6 "Above Freq" Drive exceeds the frequency (Hz) value set in 1222 [Relay Out Level]. 7 "Above Cur" Drive exceeds the current (% Amps) value set in 1222 [Relay Out Level]. Important: Value for 1222 [Relay Out Level] must be entered in percent of drive rated output current. 8 "Above DCVolt" Drive exceeds the DC bus voltage value set in 1222 [Relay Out Level]. 9 "Retries Exst" Value set in A451 [Auto Rstrt Tries] is exceeded. 10 "Above Anlg V" • Analog input voltage (I/O Terminal 13) exceeds the value set in 1222 [Relay Out Level]. • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor. • Use 1222 to set threshold. 11 "ParamControl" Enables the output to be controlled over network communications by writing to 1222 [Relay Out Level]. (0 = Off, 1 = On.) 12 "NonRec Fault" • Value set in A451 [Auto Rstrt Tries] is exceeded. • A451 [Auto Rstrt Tries] is not enabled. • A Non-resettable fault has occurred. 13 "I/O Control" Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.	Options	0	"Ready/Fault" (Default)	Relay changes state when power is applied. This indicates that the drive is ready for operation. Relay returns drive to shelf state when power is removed or a fault occurs.
3 "Reverse" Drive is commanded to run in reverse direction. 4 "Motor Overld" Motor overload condition exists. 5 "Ramp Reg" Ramp regulator is modifying the programmed accel/decel times to avoid an overcurrent or overvoltage fault from occurring. 6 "Above Freq" Drive exceeds the frequency (Hz) value set in 1222 [Relay Out Level].  7 "Above Cur" Drive exceeds the current (% Amps) value set in 1222 [Relay Out Level].  Important: Value for 1222 [Relay Out Level] must be entered in percent of drive rated output current.  8 "Above DCVolt" Drive exceeds the DC bus voltage value set in 1222 [Relay Out Level].  9 "Retries Exst" Value set in A451 [Auto Rstrt Tries] is exceeded.  10 "Above Anlg V" • Analog input voltage (I/O Terminal 13) exceeds the value set in 1222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use 1222 to set threshold.  11 "ParamControl" Enables the output to be controlled over network communications by writing to 1222 [Relay Out Level].  (0 = Off, 1 = On.)  12 "NonRec Fault" • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred.  Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		1	"At Frequency"	Drive reaches commanded frequency.
4 "Motor Overld" Motor overload condition exists.  5 "Ramp Reg" Ramp regulator is modifying the programmed accel/decel times to avoid an overcurrent or overvoltage fault from occurring.  6 "Above Freq" Drive exceeds the frequency (Hz) value set in 1222 [Relay Out Level].  7 "Above Cur" Drive exceeds the current (% Amps) value set in 1222 [Relay Out Level].  Important: Value for 1222 [Relay Out Level] must be entered in percent of drive rated output current.  8 "Above DCVolt" Drive exceeds the DC bus voltage value set in 1222 [Relay Out Level].  9 "Retries Exst" Value set in A451 [Auto Rstrt Tries] is exceeded.  10 "Above Anlg V" • Analog input voltage (I/O Terminal 13) exceeds the value set in 1222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use 1222 to set threshold.  11 "ParamControl" Enables the output to be controlled over network communications by writing to 1222 [Relay Out Level]. (0 = Off, 1 = On.)  12 "NonRec Fault"" • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred.  Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		2	"MotorRunning"	Motor is receiving power from the drive.
Famp Reg"  Ramp regulator is modifying the programmed accel/decel times to avoid an overcurrent or overvoltage fault from occurring.  Drive exceeds the frequency (Hz) value set in 1222 [Relay Out Level].  This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  Use 1222 [relay Out Level].  This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  Use 1222 to set threshold.  Therefore Tault"  Value set in A451 [Auto Rith Tries] is exceeded.  This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  Use 1222 to set threshold.  Therefore Tault are the controlled over network communications by writing to 1222 [Relay Out Level].  (0 = Off, 1 = On.)  Value set in A451 [Auto Rith Tries] is exceeded.  A451 [Auto Rith Tries] is not enabled.  ANon-resettable fault has occurred.  Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		3	"Reverse"	Drive is commanded to run in reverse direction.
times to avoid an overcurrent or overvoltage fault from occurring.  6 "Above Freq" Drive exceeds the frequency (Hz) value set in t222 [Relay Out Level].  7 "Above Cur" Drive exceeds the current (% Amps) value set in t222 [Relay Out Level].  Important: Value for t222 [Relay Out Level] must be entered in percent of drive rated output current.  8 "Above DCVolt" Drive exceeds the DC bus voltage value set in t222 [Relay Out Level].  9 "Retries Exst" Value set in A451 [Auto Rstrt Tries] is exceeded.  10 "Above Anlg V" • Analog input voltage (I/O Terminal 13) exceeds the value set in t222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use t222 to set threshold.  11 "ParamControl" Enables the output to be controlled over network communications by writing to t222 [Relay Out Level]. (0 = Off, 1 = On.)  12 "NonRec Fault" • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred.  Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		4	"Motor Overld"	Motor overload condition exists.
Level].  7 "Above Cur"  Drive exceeds the current (% Amps) value set in 1222 [Relay Out Level].  Important: Value for 1222 [Relay Out Level] must be entered in percent of drive rated output current.  8 "Above DCVolt"  Drive exceeds the DC bus voltage value set in 1222 [Relay Out Level].  9 "Retries Exst"  Value set in A451 [Auto Rstrt Tries] is exceeded.  • Analog input voltage (I/O Terminal 13) exceeds the value set in 1222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use 1222 to set threshold.  11 "ParamControl"  Enables the output to be controlled over network communications by writing to 1222 [Relay Out Level]. (0 = Off, 1 = On.)  12 "NonRec Fault""  • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred.  Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		5	"Ramp Reg"	times to avoid an overcurrent or overvoltage fault from
Out Level].  Important: Value for t222 [Relay Out Level] must be entered in percent of drive rated output current.  8 "Above DCVolt"  Drive exceeds the DC bus voltage value set in t222 [Relay Out Level].  9 "Retries Exst"  Value set in A451 [Auto Rstrt Tries] is exceeded.  • Analog input voltage (I/O Terminal 13) exceeds the value set in t222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use t222 to set threshold.  11 "ParamControl"  Enables the output to be controlled over network communications by writing to t222 [Relay Out Level]. (0 = Off, 1 = On.)  12 "NonRec Fault"  • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred.  Enables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		6	"Above Freq"	
in percent of drive rated output current.  8 "Above DCVolt"  Drive exceeds the DC bus voltage value set in t222 [Relay Out Level].  9 "Retries Exst"  Value set in A451 [Auto Rstrt Tries] is exceeded.  • Analog input voltage (I/O Terminal 13) exceeds the value set in t222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use t222 to set threshold.  11 "ParamControl"  Enables the output to be controlled over network communications by writing to t222 [Relay Out Level]. (0 = Off, 1 = On.)  12 "NonRec Fault"  • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred.  Inables the output to be controlled by bit 6 of the logic command word. See Writing (06) Logic Command Data on page C-4 for more information.		7	"Above Cur"	
Out Level].  9 "Retries Exst"  Value set in A451 [Auto Rstrt Tries] is exceeded.  • Analog input voltage (I/O Terminal 13) exceeds the value set in 1222 [Relay Out Level].  • This parameter setting can also be used to indicate a PTC trip point when the input (I/O Terminal 13) is wired to a PTC and external resistor.  • Use 1222 to set threshold.  11 "ParamControl"  Enables the output to be controlled over network communications by writing to 1222 [Relay Out Level]. (0 = Off, 1 = On.)  12 "NonRec Fault"  • Value set in A451 [Auto Rstrt Tries] is exceeded.  • A451 [Auto Rstrt Tries] is not enabled.  • A Non-resettable fault has occurred. ## **Terminal Block Group** (continued)

### t222 [Relay Out Level]

Related Parameter(s): t221

32 32 bit parameter.

Sets the trip point for the digital output relay if the value of t221 [Relay Out Sel] is 6, 7, 8, 10 or 11.

t221 Setting	t222 Min/Max
6	0/400 Hz
7	0/180%
8	0/815 Volts
10	0/100%
11	0/1

Values	Default	0.0
	Min/Max:	As above
	Display:	0.1

### **Communications Group**

#### C301 [Language]

Selects the language displayed by the remote communications option.

Options	1	"English" (Default)
	2	"Second Lang" (Reserved)

### C302 [Comm Data Rate]

Related Parameter(s): d015

Sets the serial port rate for the RS485 (DSI) port.

**Important:** Power to drive must be cycled before any changes will affect drive operation.

Options	0	"1200"
	1	"2400"
	2	"4800"
	3	"9600" (Default)
	4	"19.2K"
	5	"38.4K"

#### C303 [Comm Node Addr]

Related Parameter(s): d015

Sets the drive node address for the RS485 (DSI) port if using a network connection.

**Important:** Power to drive must be cycled before any changes will affect drive operation.

Values	Default	100
	Min/Max:	1/247
	Display:	1

#### C304 [Comm Loss Action]

Related Parameter(s): d015, P107, C305

Selects the drive's response to a loss of the communication connection or excessive communication errors.

Options	0	"Fault" (Default)	Drive will fault on an F81 Comm Loss and coast to stop.
	1	"Coast to Stop"	Stops drive via coast to stop.
	2	"Stop"	Stops drive via P107 [Stop Mode] setting.
	3	"Continu Last"	Drive continues operating at communication commanded speed saved in RAM.

### **Communications Group** (continued)

#### C305 [Comm Loss Time]

Sets the time that the drive will remain in communication loss before implementing the option selected in C304 [Comm Loss Action].

Related Parameter(s): d015, C304

Values	Default	5.0 Secs
	Min/Max:	0.1/60.0 Secs
	Display:	0.1 Secs

### C306 [Comm Format]

Selects the protocol (RTU only), data bits (8 data bits only), parity (None, Even, Odd), and stop bits (1 stop bit only) used by the RS485 port on the drive.

Refer to Appendix C for details on using the drive communication features.

**Important:** Power to drive must be cycled before any changes will affect drive operation.

Options	0	"RTU 8-N-1" (Default)
	1	"RTU 8-E-1"
	2	"RTU 8-O-1"
	3	"RTU 8-N-2"
	4	"RTU 8-E-2"
	5	"RTU 8-O-2"

### C307 [Comm Write Mode]

Determines whether parameter changes made over communication port are saved and stored in Non-Volatile Storage (NVS) or RAM only. If they are stored in RAM, the values will be lost at power-down.

Options	0	"Save" (Default)
	1	"RAM Only"

**ATTENTION:** Risk of equipment damage exists. If a controller is programmed to write parameter data to Non-Volatile Storage (NVS) frequently, the NVS will quickly exceed its life cycle and cause the drive to malfunction. Do not create a program that frequently uses configurable outputs to write parameter data to NVS unless C307 [Comm Write Mode] is set to option 1.

### **Advanced Program Group**

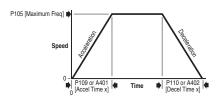

### A401 [Accel Time 2]

Related Parameter(s): P109

When active, sets the rate of acceleration for all speed increases except jog. Refer to the flowchart on page 1-20 for details.

Maximum Freq Accel Rate

Values	Default	20.0 Secs
	Min/Max:	0.0/600.0 Secs
	Display:	0.1 Secs

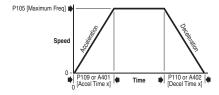

### A402 [Decel Time 2]

Related Parameter(s): P110

When active, sets the rate of deceleration for all speed decreases except jog. Refer to the flowchart on page 1-20 for details.

Maximum Freq Decel Rate = Decel Rate

Values	Default	20.0 Secs
	Min/Max:	0.1/600.0 Secs
	Display:	0.1 Secs

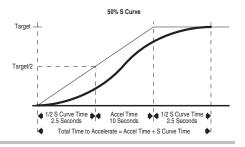

#### A403 [S Curve %]

Sets the percentage of acceleration or deceleration time that is applied to the ramp as S Curve. Time is added, 1/2 at the beginning and 1/2 at the end of the ramp.

Values	Default	0% (Disabled)
	Min/Max:	0/100%
	Display:	1%

#### Example:

Accel Time = 10 Seconds S Curve Setting = 50% S Curve Time = 10 × 0.5 = 5 Seconds Total Time = 10 + 5 = 15 Seconds

#### A404 [Jog Frequency]

Related Parameter(s): P105, t201, t202, A405

Sets the output frequency when a jog command is issued.

Values	Default	10.0 Hz
	Min/Max:	0.0/ <u>P105</u> [Maximum Freq]
	Display:	0.1 Hz

### A405 [Jog Accel/Decel]

Related Parameter(s): t201, t202, A404

Sets the acceleration and deceleration time when a jog command is issued.

Values	Default	10.0 Secs
	Min/Max:	0.1/600.0 Secs
	Display:	0.1 Secs

### A409 [Internal Freq]

Related Parameter(s): P108

Provides the frequency command to the drive when P108 [Speed Reference] is set to 1 "Internal Freq". When enabled, this parameter will change the frequency command in "real time" using the integral keypad Up Arrow or Down Arrow when in program mode.

**Important:** Once the desired command frequency is reached, the Enter key must be pressed to store this value to EEPROM memory. If the ESC key is used before the Enter key, the frequency will return to the original value following the normal accel/decel curve.

Values	Default	60.0 Hz
	Min/Max:	0.0/400.0 Hz
	Display:	0.1 Hz

A410 [Preset Freq 0] <sup>(1)</sup> A411 [Preset Freq 1] A412 [Preset Freq 2] A413 [Preset Freq 3]		Related Parameter(s): P108, P109, P110, t201, t202, A401, A402
Values	A410 Default	0.0 Hz
	A411 Default	5.0 Hz
	A412 Default	10.0 Hz
	A413 Default	20.0 Hz
	Min/Max:	0.0/400.0 Hz
	Display:	0.1 Hz

Provides a fixed frequency command value when  $\frac{1201}{200}$  [Digital Inx Sel] is set to 4 "Preset Frequencies".

An active preset input will override speed command as shown in the flowchart on page 1-20.

(1) To activate A410 [Preset Freq 0] set P108 [Speed Reference] to option 4 "Preset Freq 0-3".

Input State of Digital In 1 (I/O Terminal 05)	Input State of Digital In 2 (I/O Terminal 06)	Frequency Source	Accel / Decel Parameter Used <sup>(2)</sup>
0	0	A410 [Preset Freq 0]	[Accel Time 1] / [Decel Time 1]
1	0	A411 [Preset Freq 1]	[Accel Time 1] / [Decel Time 1]
0	1	A412 [Preset Freq 2]	[Accel Time 2] / [Decel Time 2]
1	1	A413 [Preset Freq 3]	[Accel Time 2] / [Decel Time 2]

<sup>(2)</sup> When a Digital Input is set to "Accel 2 & Decel 2", and the input is active, that input overrides the settings in this table.

### A418 [Skip Frequency]

Sets the frequency at which the drive will not operate.

A setting of 0 disables this parameter.

Values	Default	0 Hz
	Min/Max:	0/400 Hz
	Display:	1 Hz

Related Parameter(s): A419

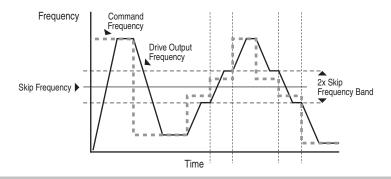

### A419 [Skip Freq Band]

Related Parameter(s): A418

Determines the bandwidth around A418 [Skip Frequency]. A419 [Skip Freq Band] is applied above and below the actual skip frequency. See the diagram below.

A setting of 0.0 disables this parameter.

Values	Default:	0.0 Hz
	Min/Max:	0.0/30.0 Hz
	Display:	0.1 Hz

### A424 [DC Brake Time]

Related Parameter(s): P107, A425

Sets the length of time that DC brake current is "injected" into the motor. Refer to parameter  $\underline{A425}$  [DC Brake Level].

Values	Default	0.0 Secs
	Min/Max:	0.0/99.9 Secs (A setting of 99.9 = Continuous)
	Display:	0.1 Secs

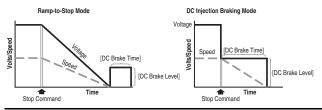

#### A425 [DC Brake Level]

Related Parameter(s): P107, A418

Related Parameter(s): A428

Defines the maximum DC brake current, in amps, applied to the motor when P107 [Stop Mode] is set to either "Ramp" or "DC Brake".

Values	Default	Drive Rated Amps × 0.05
	Min/Max:	0.0/(Drive Rated Amps × 1.8)
	Display:	0.1 Amps

**ATTENTION:** If a hazard of injury due to movement of equipment or material exists. an auxiliary mechanical braking device must be used.

**ATTENTION:** This feature should not be used with synchronous or permanent magnet motors. Motors may be demagnetized during braking.

### A427 [DB Resistor Sel]

Stop drive before changing this parameter.

Enables/disables external dynamic braking. This parameter applies only to Frame C drives.

Setting	Min/Max
0	"Disabled"
1	"Normal RA Res" (5% Duty Cycle) - Refer to Table B.C on page B-2
2	"No Protection" (100% Duty Cycle)
3	"% Duty Cycle" Limited (1% – 99% of Duty Cycle) - see A428

The drive is able to provide full braking indefinitely. Braking power is limited by the external DB resistor. When this parameter is set to 1 "Normal RA Res" and an appropriate RA resistor is used (see selection Table B.C), the drive provides calculated resistor overload protection. However, the drive cannot protect against a brake IGBT failure.

**ATTENTION:** A risk of fire exists if external braking resistors are not protected. The external resistor package must be self-protected from over temperature or the protective circuit shown in Figure B.3 on page B-7, or equivalent, must be supplied.

Values	Default	0	
	Min/Max:	0/3	
	Display:	1	

#### A428 [DB Duty Cycle]

Stop drive before changing this parameter.

Selects the duty cycle allowed for an external dynamic braking resistor when A427 [DB Resistor Sel] is set to 3. This parameter applies only to Frame C drives.

Related Parameter(s): A427

Related Parameter(s): d006

Values	Default	5%
	Min/Max:	1/99%
	Display:	1%

### A433 [Start At PowerUp]

Stop drive before changing this parameter.

Enables/disables a feature that allows a Start or Run command to automatically cause the drive to resume running at commanded speed after drive input power is restored. Requires a digital input configured for Kun or Start and a valid start contact.

**ATTENTION:** Equipment damage and/or personal injury may result if this parameter is used in an inappropriate application. Do not use this function without considering applicable local, national and international codes, standards, regulations or industry quidelines.

**Options** "Disabled" (Default) "Enabled"

#### A434 [Reverse Disable]

Stop drive before changing this parameter.

Enables/disables the function that allows the direction of motor rotation to be changed. The reverse command may come from a digital command, the keypad or a serial command. All reverse inputs including two-wire Run Reverse will be ignored with reverse disabled.

**Options** "Rev Enabled" (Default) 1 "Rev Disabled"

### A435 [Flying Start En]

Sets the condition that allows the drive to reconnect to a spinning motor at actual RPM.

**Options** "Disabled" (Default) 1 "Enabled"

#### A436 [Compensation]

Enables/disables correction options that may improve problems with motor instability.

Options	0	"Disabled"	
	1	"Electrical" (Default)	Some drive/motor combinations have inherent instabilities which are exhibited as non-sinusodial motor currents. This setting attempts to correct this condition.
	2	"Mechanical"	Some motor/load combinations have mechanical resonances which can be excited by the drive current regulator. This setting slows down the current regulator response and attempts to correct this condition.
	3	"Both"	·

### A437 [Slip Hertz @ FLA]

Related Parameter(s): P103

Compensates for the inherent slip in an induction motor. This frequency is added to the commanded output frequency based on motor current.

Values	Default	2.0 Hz	
	Min/Max:	0.0/10.0 Hz	
	Display:	0.1 Hz	

#### A438 [Process Time Lo]

Related Parameter(s): d010, P104

Scales the time value when the drive is running at P104 [Minimum Freq]. When set to a value other than zero, d010 [Process Display] indicates the duration of the process.

Values	Default	0.00	
	Min/Max:	0.00/99.99	
	Display:	0.01	

### A439 [Process Time Hi]

Related Parameter(s): d010, P105

Scales the time value when the drive is running at P105 [Maximum Freq]. When set to a value other than zero, d010 [Process Display] indicates the duration of the process.

Values	Default	0.00	
	Min/Max:	0.00/99.99	
	Display:	0.01	

#### A440 [Process Factor]

Related Parameter(s): d010

Scales the value displayed by d010 [Process Display].

Values	Default	30.0
	Min/Max:	0.1/999.9
	Display:	0.1

### A441 [Bus Reg Mode]

Controls the operation of the drive voltage regulation, which is normally operational at deceleration or when the bus voltage rises.

Refer to the Attention statement on page P-3 for important information on bus regulation.

Values	0	"Disabled"
	1	"Enabled" (Default)

#### A442 [Current Limit]

Maximum output current allowed before current limiting occurs.

Values	Default	Drive Rated Amps × 1.5
Min/Max: 0.1		0.1/(Drive Rated Amps × 1.8)
	Display:	0.1 Amps

### A444 [Motor OL Select]

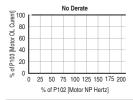

Related Parameter(s): P102, P103

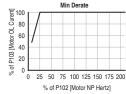

Drive provides Class 10 motor overload protection. Settings 0-2 select the derating factor for the  $I^2$ t overload function.

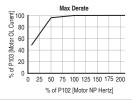

Options 0 "No Derate" (Default)

1 "Min Derate"

2 "Max Derate"

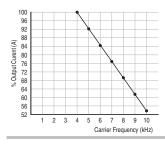

### A446 [PWM Frequency]

Sets the carrier frequency for the PWM output waveform. The chart below provides derating guidelines based on the PWM frequency setting.

**Important:** Ignoring derating guidelines can cause reduced drive performance.

Values	Default	4.0 kHz
	Min/Max:	2.0/10.0 kHz
	Display:	0.1 kHz

### A448 [SW Current Trip]

Related Parameter(s): P103

Enables/disables a software instantaneous (within 100 ms) current trip.

Values	Default	0.0 (Disabled)
	Min/Max:	0.0/(Drive Rated Amps × 2)
Display: 0		0.1 Amps

#### A450 [Fault Clear]

Stop drive before changing this parameter.

Resets a fault and clears the fault queue. Used primarily to clear a fault over network communications.

resolution and close the later quote. Good primarily to close a later over network communications.			
Options	0	"Ready/Idle" (Default)	
	1	"Reset Fault"	
	2	"Clear Buffer"	(Parameters d007-d009 [Fault x Code])

#### A451 [Auto Rstrt Tries]

Sets the maximum number of times the drive attempts to reset a fault and restart.

#### Clear a Type 1 fault and restart the drive.

- 1. Set A451 [Auto Rstrt Tries] to a value other than "0".
- 2. Set A452 [Auto Rstrt Delay] to a value other than "0".

#### Clear an OverVoltage, UnderVoltage or Heatsink OvrTmp fault without restarting the drive.

- 1. Set A451 [Auto Rstrt Tries] to a value other than "0".
- 2. Set A452 [Auto Rstrt Delay] to "0".

ATTENTION: Equipment damage and/or personal injury may result if this parameter is used in an inappropriate application. Do not use this function without considering applicable local, national and international codes, standards, regulations or industry quidelines.

Values	Default	0	
	Min/Max:	0/9	
	Display:	1	

### A452 [Auto Rstrt Delay]

Related Parameter(s): A451

Sets the time between restart attempts when A451 [Auto Rstrt Tries] is set to a value other than zero.

Values	Default	1.0 Secs
	Min/Max:	0.0/120.0 Secs
	Display:	0.1 Secs

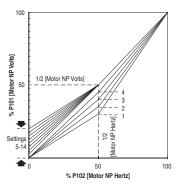

### A453 [Boost Select]

Related Parameter(s): d004, P101, P102

Sets the boost voltage (% of  $\underline{P101}$  [Motor NP Volts]) and redefines the Volts per Hz curve. (1)

(1) Drive may add additional voltage unless option 5 is selected.

Dilve	пау	add additional voltage diffees option o	is sciedicu.
Options	1	"30.0, VT"	
	2	"35.0, VT"	Variable Tergue
	3	"40.0, VT"	Variable Torque
	4	"45.0, VT"	
	5	"0.0 no IR"	
	6	"0.0"	
	7	"2.5, CT" [Default for 3.7, 5.5, 7.5 & 11.0 kW (5.0, 7.5, 10.0 & 15.0 HP) Drives]	
	8	"5.0, CT" (Default)	Constant Torque
	9	"7.5, CT"	Constant ronges
	10	"10.0, CT"	
	11	"12.5, CT"	
	12	"15.0, CT"	
	13	"17.5, CT"	
	14	"20.0, CT"	

### A457 [Maximum Voltage]

Sets the highest voltage the drive will output.

Values	Default	Drive Rated Volts
	Min/Max:	20/Drive Rated Volts
Display:		1 VAC

### A458 [Program Lock]

Protects parameters against change by unauthorized personnel.

Options	0	"Unlocked" (Default)
	1	"Locked"

### A459 [Testpoint Sel]

Used by Rockwell Automation field service personnel.

Values	Default	400
	Min/Max:	0/FFFF
	Display:	1 Hex

### A461 [Motor NP FLA]

Set to the motor nameplate rated full load amps.

Values	Default	Drive Rated Amps		
	Min/Max:	0.1/(Drive Rated Amps × 2)		
	Display:	0.1 Amps

Notes:

# **Troubleshooting**

Chapter 4 provides information to guide you in troubleshooting the PowerFlex 4M drive. Included is a listing and description of drive faults (with possible solutions, when applicable).

For information on	See page	For information on	See page
<u>Drive Status</u>	<u>4-1</u>	Fault Descriptions	4-3
<u>Faults</u>	4-1	Common Symptoms and Corrective Actions	4-5

## **Drive Status**

The condition or state of your drive is constantly monitored. Any changes will be indicated through the integral keypad.

#### **LED Indications**

See page 2-3 for information on drive status indicators and controls.

#### **Faults**

A fault is a condition that stops the drive. There are two fault types.

Туре	<b>Fault Description</b>	
1	Auto-Reset/Run	When this type of fault occurs, and $\underline{A451}$ [Auto Rstrt Tries] is set to a value greater than "0," a user-configurable timer, $\underline{A452}$ [Auto Rstrt Delay], begins. When the timer reaches zero, the drive attempts to automatically reset the fault. If the condition that caused the fault is no longer present, the fault will be reset and the drive will be restarted.
2	Non-Resetable	This type of fault may require drive or motor repair, or is caused by wiring or programing errors. The cause of the fault must be corrected before the fault can be cleared.

#### **Fault Indication**

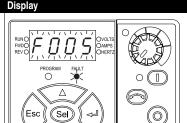

#### Condition

#### Drive is indicating a fault.

The integral keypad provides visual notification of a fault condition by displaying the following.

- Flashing fault number
- · Flashing fault indicator

Press the Escape key to regain control of the integral keypad.

## **Manually Clearing Faults**

#### Step

- Press Esc to acknowledge the fault. The fault information will be removed so that you can use the integral keypad.
  - Access d007 Fault 1 Code to view the most recent fault information.
- Address the condition that caused the fault.
   The cause must be corrected before the fault can be cleared.
   See <u>Table 4.A.</u>
- After corrective action has been taken, clear the fault by one of these methods.
- Press Stop if P107 [Stop Mode] is set to a value between "0" and "3".
- Cycle drive power.
- Set A450 [Fault Clear] to "1" or "2".
- Cycle digital input if t201 1202 [Digital Inx Select] is set to option 7
  "Clear Fault".

Key(s)

## **Automatically Clearing Faults**

#### Option / Step

Clear a Type 1 fault and restart the drive.

- 1. Set A451 [Auto Rstrt Tries] to a value other than "0".
- 2. Set A452 [Auto Rstrt Delay] to a value other than "0".

Clear an OverVoltage, UnderVoltage or Heatsink OvrTmp fault without restarting the drive.

- 1. Set A451 [Auto Rstrt Tries] to a value other than "0".
- 2. Set A452 [Auto Rstrt Delay] to "0".

## Auto Restart (Reset/Run)

The Auto Restart feature provides the ability for the drive to automatically perform a fault reset followed by a start attempt without user or application intervention. This allows remote or "unattended" operation. Only certain faults are allowed to be reset. Certain faults (Type 2) that indicate possible drive component malfunction are not resettable.

Caution should be used when enabling this feature, since the drive will attempt to issue its own start command based on user selected programming.

# **Fault Descriptions**

Table 4.A Fault Types, Descriptions and Actions

No.	Fault	Type <sup>(1)</sup>	Description	Action
F2	Auxiliary Input	1	Auxiliary input interlock is open.	Check remote wiring.     Verify communications programming for intentional fault.
F3	Power Loss	2	Excessive DC Bus voltage ripple.	Monitor the incoming line for phase loss or line imbalance.     Check input line fuse.
F4	UnderVoltage	1	DC bus voltage fell below the minimum value.	Monitor the incoming AC line for low voltage or line power interruption.
F5	OverVoltage	1	DC bus voltage exceeded maximum value.	Monitor the AC line for high line voltage or transient conditions. Bus overvoltage can also be caused by motor regeneration. Extend the decel time or install dynamic brake option.
F6	Motor Stalled	1	Drive is unable to accelerate motor.	Increase P109 and/or A402 [Accel Time x] or reduce load so drive output current does not exceed the current set by parameter A441 [Current Limit].
F7	Motor Overload	1	Internal electronic overload trip.	An excessive motor load exists.     Reduce load so drive output     current does not exceed the     current set by parameter P103     [Motor OL Current].      Verify A453 [Boost Select]     setting
F8	Heatsink OvrTmp	1	Heatsink temperature exceeds a predefined value.	Check for blocked or dirty heat sink fins. Verify that ambient temperature has not exceeded 40°C (104°F) for IP 30/NEMA 1/UL Type 1 installations or 50°C (122°F) for IP20/Open type installations.     Check fan.
F12	HW OverCurrent	2	The drive output current has exceeded the hardware current limit.	Check programming. Check for excess load, improper A453 [Boost Select] setting, DC brake volts set too high or other causes of excess current.
F13	Ground Fault	2	A current path to earth ground has been detected at one or more of the drive output terminals.	Check the motor and external wiring to the drive output terminals for a grounded condition.

<sup>(1)</sup> See page 4-1 for a description of fault types.

No.	Fault	Type <sup>(1)</sup>	Description	Action
F33	Auto Rstrt Tries	2	Drive unsuccessfully attempted to reset a fault and resume running for the programmed number of A451 [Auto Rstrt Tries].	Correct the cause of the fault and manually clear.
F38	Phase U to Gnd	2	A phase to ground fault has been	Check the wiring between the
F39	Phase V to Gnd		detected between the drive and	drive and motor.
F40	Phase W to Gnd		motor in this phase.	<ol> <li>Check motor for grounded phase.</li> <li>Replace drive if fault cannot be cleared.</li> </ol>
F41	Phase UV Short	2	Excessive current has been	1. Check the motor and drive output
F42 F43	Phase UW Short		detected between these two output terminals.	terminal wiring for a shorted condition.
Г43	Phase VW Short		'	Replace drive if fault cannot be cleared.
F48	Params Defaulted		The drive was commanded to write default values to EEPROM.	Clear the fault or cycle power to the drive.
				Program the drive parameters as needed.
F63	SW OverCurrent	1	Programmed A448 [SW Current Trip] has been exceeded.	Check load requirements and A448 [SW Current Trip] setting.
F64	Drive Overload	2	Drive rating of 150% for 1 minute or 200% for 3 seconds has been exceeded.	Reduce load or extend Accel Time.
F70	Power Unit	2	Failure has been detected in the drive power section.	Cycle power.     Replace drive if fault cannot be cleared.
F71	Net Loss		The communication network has	Cycle power.
.,,	1401 2000		faulted.	Check communications cabling.
				Check network adapter setting.
				Check external network status.
F81	Comm Loss	2	RS485 (DSI) port stopped communicating.	If adapter was not intentionally disconnected, check wiring to the port. Replace wiring, port expander, adapters or complete drive as required.     Check connection.     An adapter was intentionally disconnected.     Turn off using C304 [Comm Loss Astical].
E400	D		The about one of form "	Action].
F100	Parameter Checksum	2	The checksum read from the board does not match the checksum calculated.	Set P112 [Reset To Defalts] to option 1 "Reset Defaults".
F122	I/O Board Fail	2	Failure has been detected in the drive control and I/O section.	Cycle power.     Replace drive if fault cannot be cleared.

 $<sup>^{(1)}</sup>$  See page 4-1 for a description of fault types.

# **Common Symptoms and Corrective Actions**

#### Motor does not Start.

Cause(s)	Indication	Corrective Action
No output voltage to the motor.	None	Check the power circuit.  Check the supply voltage.  Check all fuses and disconnects.
		Verify that the motor is connected properly.
		Check the control input signals. Verify that a Start signal is present. If 2-Wire control is used, verify that either the Run Forward or Run Reverse signal is active, but not both. Verify that I/O Terminal 01 is active. Verify that P106 [Start Source] matches your configuration. Verify that A434 [Reverse Disable] is not prohibiting movement.
Improper boost setting at initial start-up.	None	Set A453 [Boost Select] to option 2 "35.0, VT".
Drive is Faulted	Flashing red status light	Clear fault.  Press Stop  Cycle power  Set A450 [Fault Clear] to option 1 "Clear Faults".  Cycle digital input if t201 - t202 [Digital Inx Sel] is set to option 7 "Clear Fault".

#### Drive does not Start from Integral Keypad.

Cause(s)	Indication	Corrective Action	
Integral keypad is not enabled.	Green LED above Start key is not illuminated.	Set parameter P106 [Start Source] to option 0 "Keypad".  Set parameter t201 - t202 [Digital Inx Select] to option 5 "Local" and activate the input.	
I/O Terminal 01 "Stop" input is not present.	None	Wire inputs correctly and/or install jumper.	

## Drive does not Start from Start or Run Inputs wired to the terminal block.

Cause(s)	Indication	Corrective Action
Drive is Faulted	Flashing red status light	Clear fault.  Press Stop  Cycle power  Set A450 [Fault Clear] to option 1 "Clear Faults".  Cycle digital input if t201 - t202 [Digital Inx Select] is set to option 7 "Clear Fault".
Incorrect programming.  • P106 [Start Source] is set to option 0 "Keypad" or option 5 "RS485 (DSI) Port".  • t201 - t202 [Digital Inx Select] is set to option 5 "Local" and the input is active.	None	Check parameter settings.
Incorrect input wiring.  See 1-15 for wiring examples.  2 wire control requires Run Forward, Run Reverse or Jog input.  3 wire control requires Start and Stop inputs  Stop input is always required.	None	Wire inputs correctly and/or install jumper.
Incorrect Sink/Source DIP switch setting.	None	Set switch to match wiring scheme.

## Drive does not respond to changes in speed command.

ggg			
Cause(s)	Indication	Corrective Action	
No value is coming from the source of the command.	The drive "Run" indicator is lit and output is 0 Hz.	Check d012 [Control Source] for correct source.  If the source is an analog input, check wiring and use a meter to check for presence of signal.  Check d002 [Commanded Freq] to verify correct command.	
Incorrect reference source is being selected via remote device or digital inputs.	None	Check d012 [Control Source] for correct source. Check d014 [Dig In Status] to see if inputs are selecting an alternate source. Verify settings for t201 - t202 [Digital Inx Select]. Check P108 [Speed Reference] for the source of the speed reference. Reprogram as necessary. Review the Speed Reference Control chart on page 1-19.	

## Motor and/or drive will not accelerate to commanded speed.

		•
Cause(s)	Indication	Corrective Action
Acceleration time is excessive.	None	Reprogram P109 [Accel Time 1] or A401 [Accel Time 2].
Excess load or short acceleration times force the	None	Compare d003 [Output Current] with A441 [Current Limit].
drive into current limit, slowing or stopping acceleration.		Remove excess load or reprogram P109 [Accel Time 1] or A401 [Accel Time 2].
		Check for improper A453 [Boost Select] setting.
Speed command source or	None	Verify d002 [Commanded Freq].
value is not as expected.		Check <u>d012</u> [Control Source] for the proper Speed Command.
Programming is preventing the drive output from exceeding limiting values.	None	Check P105 [Maximum Freq] to insure that speed is not limited by programming.

## Motor operation is unstable.

Cause(s)	Indication	Corrective Action
Motor data was incorrectly entered.	None	Correctly enter motor nameplate data into P101, P102 and P103.     Enable A436 [Compensation].     Use A453 [Boost Select] to reduce boost level.

#### Drive will not reverse motor direction.

Cause(s)	Indication	Corrective Action
Digital input is not selected for reversing control.	None	Check [Digital Inx Sel] (See page 3-13). Choose correct input and program for reversing mode.
Digital input is incorrectly wired.	None	Check input wiring. (See page 1-14)
Motor wiring is improperly phased for reverse.	None	Switch two motor leads.
Reverse is disabled.	None	Check A434 [Reverse Disable].

## Drive does not power up.

Cause(s)	Indication	Corrective Action
No input power to drive.	None	Check the power circuit.  Check the supply voltage.  Check all fuses and disconnects.
Jumper between I/O Terminals P2 and P1 not installed and/or DC Bus Inductor not connected.	None	Install jumper or connect DC Bus Inductor.

# **Supplemental Drive Information**

For information on	See page
Drive, Fuse & Circuit Breaker Ratings	<u>A-1</u>
Specifications	<u>A-2</u>

## **Drive, Fuse & Circuit Breaker Ratings**

The tables on the following pages provide recommended AC line input fuse and circuit breaker information. See Fusing and Circuit Breakers below for UL and IEC requirements. Sizes listed are the recommended sizes based on 40  $^{\circ}$ C (104  $^{\circ}$ F) and the U.S. N.E.C. Other country, state or local codes may require different ratings.

#### **Fusing**

The recommended fuse types are listed below. If available current ratings do not match those listed in the tables provided, choose the next higher fuse rating.

- IEC BS88 (British Standard) Parts 1 & 2<sup>(1)</sup>, EN60269-1, Parts 1 & 2, type gG or equivalent should be used.
- UL UL Class RK1, T or J must be used. (2)

#### **Circuit Breakers**

The "non-fuse" listings in the following tables include inverse time circuit breakers, instantaneous trip circuit breakers (motor circuit protectors) and 140M self-protected combination motor controllers. If one of these is chosen as the desired protection method, the following requirements apply:

- IEC Both types of circuit breakers and 140M self-protected combination motor controllers are acceptable for IEC installations.
- UL Only inverse time circuit breakers and the specified 140M self-protected combination motor controllers are acceptable for UL installations.

<sup>(1)</sup> Typical designations include, but may not be limited to the following; Parts 1 & 2: AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH.

<sup>(2)</sup> Typical designations include; Type J - JKS, LPJ, DFJ Type T - JJS, JJN Type RK1 - LPS, KTS, KTN

<sup>(1)</sup> Catalog suffix ending with '4', such as N104 and N114, indicate that an internal brake IGBT is supplied.

<sup>(2)</sup> The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers may vary. See <u>Bulletin 140M Motor Protection</u> <u>Circuit Breakers Application Ratings</u>.

<sup>(3)</sup> Manual Self-Protected (Type E) Combination Motor Controller, UL listed for 208 Wye or Delta, 240 Wye or Delta, 480Y/ 277 or 600Y/347. Not UL listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.

(4) When using a Manual Self-Protected (Type E) Combination Motor Controller, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume specified in this column. Application specific thermal considerations may require a larger enclosure.

**Dynamic Braking** 

Internal brake IGBT included with power ratings 5.5 kW (7.5 HP) and 7.5 kW (10.0 HP) for 240V, 3-phase drives and 5.5 kW (7.5 HP), 7.5 kW (10.0 HP) and 11.0 kW (15.0 HP) for 480V, 3-phase drives. See <a href="Appendix B">Appendix B</a> for ordering information.

Category	Specification								
Environment	Altitude:	1000 m (3300 ft) max. without derating							
	Maximum Surrounding Air								
	Temperature without derating:								
	IP20:	-10 to 50° C (14 to 122° F)							
	IP20 zero stacking:	-10 to 40° C (14 to 104° F)							
	Cooling Method								
	Convection:	120V, 1-Phase, 0.75 kW (1 HP) and below 240V, 1-Phase, 0.4 kW (0.5 HP) and below 240V, 3-Phase, 0.75 kW (1 HP) and below 480V, 3-Phase, 0.75 kW (1 HP) and below							
	Fan:	All other drive ratings.							
	Storage Temperature:	-40 to 85 degrees C (-40 to 185 degrees F)							
	Atmosphere:	Important: Drive must not be installed in an area where the ambient atmosphere contains volatile or corrosive gas, vapors or dust. If the drive is not going to be installed for a period of time, it must be stored in an area where it will not be exposed to a corrosive atmosphere.							
	Relative Humidity:	0 to 95% non-condensing							
	Shock (operating):	15G peak for 11ms duration (±1.0ms)							
	Vibration (operating):	1G peak, 5 to 2000 Hz							
Control	Carrier Frequency	2-10 kHz. Drive rating based on 4 kHz.							
	Frequency Accuracy Digital Input: Analog Input: Speed Regulation - Open Loop	Within ±0.05% of set output frequency. Within 0.5% of maximum output frequency. ±2% of base speed across a 40:1 speed range.							
	with Slip Compensation:								
	Stop Modes:	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Ramp-to-Hold and S Curve.							
	Acceleration/Deceleration:	Two independently programmable acceleration and deceleration times. Each time may be programmed from 0 - 600 seconds in 0.1 second increments.							
	Intermittent Overload:	150% Overload capability for up to 1 minute							
		200% Overload capability for up to 3 seconds							
	Electronic Motor Overload Protection	Provides class 10 motor overload protection according to NEC article 430 and motor over-temperature protection according to NEC article 430.126 (A) (2). UL 508C File 29572.							
Electrical	Voltage Tolerance:	200-240V ±10% 380-480V ±10% 460-600V ±10%							
	Frequency Tolerance:	48-63 Hz							
	Input Phases:	Three-phase input provides full rating. Single-phase operation provides 35% rated current.							
	Displacement Power Factor:	0.98 across entire speed range							
	Maximum Short Circuit Rating:	100,000 Amps Symmetrical							
	Actual Short Circuit Rating:	Determined by AIC Rating of installed fuse/circuit breaker							
	Transistor Type:	Isolated Gate Bipolar (IGBT)

<sup>(1)</sup> The resistors listed in this table are rated for 5% duty cycle.

<sup>(2)</sup> This filter is suitable for use with a cable length of up to 10 meters (33 feet) for EN61800-3 Second environment.

<sup>(3)</sup> Catalog suffix ending with '4', such as N104 and N114, indicate that an internal brake IGBT is supplied.

<sup>(2)</sup> Use of Rockwell resistors is always recommended. The resistors listed have been carefully selected for optimizing performance in a varity of applications. Alternative resistors may be used, however care must be taken when making a selection. Refer to the *PowerFlex Dynamic Braking Resistor Calculator*, publication PFLEX-AT001....

<sup>(3)</sup> Requires two resistors wired in parallel.

<sup>(1)</sup> This filter is suitable for use with a cable length up to 5 meters (16 feet) for Class A and 1 meter (3 feet) for Class B environments.

<sup>(2)</sup> These ratings can be ordered with internal "S Type" filters. Refer to the Catalog Number explanation on page P-4 and Table B.B for details.

<sup>(3)</sup> This filter is suitable for use with a cable length up to 100 meters (328 feet) for Class A and 25 meters (82 feet) for Class B environments.

Table B.G Human Interface Module (HIM) Option Kits and Accessories

Item	Description	Catalog Number
LCD Display, Remote Panel Mount	Digital speed control CopyCat capable IP66 (NEMA Type 4X/12) indoor use only 22-HIM-C2 includes 2.9 meter cable. 22-HIM-C2S includes 2 meter cable.	22-HIM-C2 22-HIM-C2S <sup>(1)</sup>
LCD Display, Remote Handheld	Digital speed control Full numeric keypad CopyCat capable IP30 (NEMA Type 1) Includes 1.0 meter cable Panel mount with optional Bezel Kit	22-HIM-A3
Bezel Kit	Panel mount for LCD Display, Remote Handheld unit, IP30 (NEMA Type 1)	22-HIM-B1
DSI HIM Cable (DSI HIM to RJ45 cable)	1.0 Meter (3.3 Feet) 2.9 Meter (9.51 Feet)	22-HIM-H10 22-HIM-H30

<sup>(1)</sup> The 22-HIM-C2S is smaller than the 22-HIM-C2 and cannot be used as a direct replacement.

Table B.H Communication Option Kits

Item	Description	Catalog Number (2)
External DSI <sup>TM</sup> Communications Kit	External mounting kit for 22-COMM-C, -D, -E, -P.	22-XCOMM-DC-BASE
External Comms Power Supply	Optional 100-240V AC Power Supply for External DSI Communications Kit.	20-XCOMM-AC-PS1
Compact I/O Module	Three channel.	1769-SM2
Serial Converter Module (RS485 to RS232)	Provides serial communication via DF1 protocol for use with DriveExplorer and DriveExecutive software. Includes:  DSI to RS232 serial converter (1) 1203-SFC serial cable (1) 22-RJ45CBL-C20 cable (1) DriveExplorer Lite CD (1)	22-SCM-232
DSI Cable	2.0 meter RJ45 to RJ45 cable, male to male connectors.	22-RJ45CBL-C20
Serial Cable	2.0 meter serial cable with a locking low profile connector to connect to the serial converter and a 9-pin sub-miniature D female connector to connect to a computer.	1203-SFC
Null Cable Converter	For use when connecting the serial converter to DriveExplorer on a handheld PC.	1203-SNM
Splitter Cable	RJ45 one to two port splitter cable	AK-U0-RJ45-SC1
Terminating Resistors	RJ45 120 Ohm resistors (2 pieces)	AK-U0-RJ45-TR1
Terminal Block	RJ45 Two position terminal block (5 pieces)	AK-U0-RJ45-TB2P
DriveExplorer Software (CD-ROM) Version 3.01 or later	Windows based software package that provides an intuitive means for monitoring or configuring Allen-Bradley drives and communication adapters online.  Compatibility: Windows 95, 98, ME, NT 4.0 (Service Pack 3 or later), 2000, XP and CE <sup>(1)</sup>	9306-4EXP01ENE
DriveExecutive software (CD-ROM) Version 1.01 or later	Windows based software package that provides an intuitive means for monitoring or configuring Allen-Bradley drives and communication adapters online and offline.  Compatibility: Windows 98, ME, NT 4.0 (Service Pack 3 or later), 2000 and XP	9303-4DTE01ENE

<sup>(1)</sup> See www.ab.com/drives/driveexplorer.htm for supported devices.

<sup>(2)</sup> For pricing information, refer to the PowerFlex 4-Class *Price List*, Publication 22-PL001....

# RS485 (DSI) Protocol

PowerFlex 4M drives support the RS485 (DSI) protocol to allow efficient operation with Rockwell Automation peripherals. In addition, some Modbus functions are supported to allow simple networking. PowerFlex 4M drives can be multi-dropped on an RS485 network using Modbus protocol in RTU mode.

For information regarding DeviceNet or other communication protocols, refer to the appropriate user manual.

PowerFlex 4M

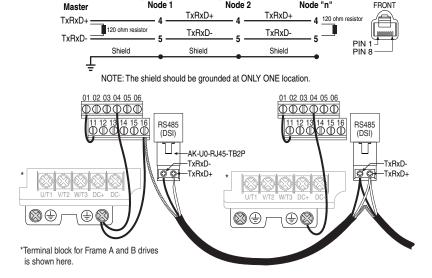

PowerFlex 4M

# **Network Wiring**

Network wiring consists of a shielded 2-conductor cable that is daisy-chained from node to node.

Figure C.1 Network Wiring Diagram

PowerFlex 4M

Only pins 4 and 5 on the RJ45 plug should be wired. The other pins on the PowerFlex 4M RJ45 socket contain power, etc. for other Rockwell Automation peripheral devices and must not be connected.

Wiring terminations on the master controller will vary depending on the master controller used and "TxRxD+" and "TxRxD-" are shown for illustration purposes only. Refer to the master controller's user manual for network terminations. Note that there is no standard for the "+" and "-" wires, and consequently Modbus device manufacturers interpret them differently. If you have problems with initially establishing communications, try swapping the two network wires at the master controller.

Standard RS485 wiring practices apply.

- Termination resistors need to be applied at each end of the network cable.
- RS485 repeaters may need to be used for long cable runs, or if greater than 32 nodes are needed on the network.
- Network wiring should be separated from power wires by at least 0.3 meters (1 foot).
- Network wiring should only cross power wires at a right angle.

Control Terminal 16 on the PowerFlex 4M must also be connected to PE ground (there are two PE terminals on the drive). See <u>Figure 1.5</u> for more information.

Network Common is internally tied to I/O Terminal 04 (Digital Common). Tying I/O Terminal 04 to PE ground may improve noise immunity in some applications.

## **Parameter Configuration**

The following PowerFlex 4M parameters are used to configure the drive to operate on a network.

Parameter	Details	Reference
P106 [Start Source]	Set to 5 "RS485 (DSI) Port" if Start is controlled from the network.	Page 3-9
P108 [Speed Reference]	Set to 5 "RS485 (DSI) Port" if the Speed Reference is controlled from the network.	Page 3-11
C302 [Comm Data Rate]	Sets the data rate for the RS485 (DSI) Port. All nodes on the network must be set to the same data rate.	Page 3-17
C303 [Comm Node Addr]	Sets the node address for the drive on the network. Each device on the network requires a unique node address.	Page 3-17
C304 [Comm Loss Action]	Selects the drive's response to communication problems.	Page 3-17
C305 [Comm Loss Time]	Sets the time that the drive will remain in communication loss before the drive implements A105 [Comm Loss Action].	Page 3-18
C306 [Comm Format]	Sets the transmission mode, data bits, parity and stop bits for the RS485 (DSI) Port. All nodes on the network must be set to the same setting.	Page 3-18

## **Supported Modbus Function Codes**

The peripheral interface (DSI) used on PowerFlex 4M drives supports some of the Modbus function codes.

Modbus Function Code (Decimal)	Command
03	Read Holding Registers
06	Preset (Write) Single Register
16 (10 Hexadecimal)	Preset (Write) Multiple Registers

Important: Modbus devices can be 0-based (registers are numbered starting at 0) or 1-based (registers are numbered starting at 1). Depending on the Modbus Master used, the register addresses listed on the following pages may need to be offset by +1. For example, Logic Command may be register address 8192 for some master devices (e.g. ProSoft 3150-MCM SLC Modbus scanner) and 8193 for others (e.g. PanelViews).

## Writing (06) Logic Command Data

The PowerFlex 4M drive can be controlled via the network by sending Function Code 06 writes to register address 8192 (Logic Command). P106 [Start Source] must be set to 5 "RS485 (DSI) Port" in order to accept the commands.

In addition to being written, register address 8192 can be read using Function Code 03.

	Logic Command					
Address (Decimal)	Bit(s)	Description				
	0	1 = Stop, 0 = Not Stop				
	1	1 = Start, 0 = Not Start				
	2	1 = Jog, 0 = No Jog				
	3	1 = Clear Faults, 0 = Not Clear Faults				
		00 = No Command				
	5,4	01 = Forward Command				
	3,4	10 = Reverse Command				
		11 = No Command				
	6	Controls the C-form relay when the value of parameter <u>1221</u> is set to 13. 1 = On, 0 = Off				
	7	1 = MOP Increment, 0 = Not Increment				
	9,8	00 = No Command				
		01 = Accel Rate 1 Enable				
8192		10 = Accel Rate 2 Enable				
		11 = Hold Accel Rate Selected				
		00 = No Command				
	11,10	01 = Decel Rate 1 Enable				
		10 = Decel Rate 2 Enable				
		11 = Hold Decel Rate Selected				
		000 = No Command				
		001 = Freq. Source = P108 [Speed Reference]				
		010 = Freq. Source = A409 [Internal Freq]				
	14,13,12	011 = Freq. Source = Comms (Addr 8193)				
	11,10,12	100 = A410 [Preset Freq 0]				
		101 = A411 [Preset Freq 1]				
		110 = A412 [Preset Freq 2]				
		111 = A413 [Preset Freq 3]				
	15	1 = MOP Decrement, 0 = Not Decrement				

## Writing (06) Reference

The Speed Reference to a PowerFlex 4M drive can be controlled via the network by sending Function Code 06 writes to register address 8193 (Reference). P108 [Speed Reference] must be set to 5 "RS485 (DSI) Port" in order to accept the Speed Reference.

In addition to being written, register address 8193 can be read using Function Code 03.

Reference				
Address (Decimal)	Description			
8193	A decimal value entered as xxx.x where the decimal point is fixed. For example, a decimal "100" equals 10.0 Hz and "543" equals 54.3 Hz.			

## Reading (03) Logic Status Data

The PowerFlex 4M Logic Status data can be read via the network by sending Function Code 03 reads to register address 8448 (Logic Status).

Logic Status					
Address (Decimal)	s (Decimal) Bit(s) Description				
	0	1 = Ready, 0 = Not Ready			
	1	1 = Active (Running), 0 = Not Active			
	2	1 = Cmd Forward, 0 = Cmd Reverse			
	3	1 = Rotating Forward, 0 = Rotating Reverse			
	4	1 = Accelerating, 0 = Not Accelerating			
	5	1 = Decelerating, 0 = Not Decelerating			
	6	1 = Alarm, 0 = No Alarm			
8448	7	1 = Faulted, 0 = Not Faulted			
0440	8	1 = At Reference, 0 = Not At Reference			
	9	1 = Reference Controlled by Comm			
	10	1 = Operation Cmd Controlled by Comm			
	11	1 = Parameters have been locked			
	12	Digital Input 1 Status			
	13	Digital Input 2 Status			
	14	Not Used			
	15	Not Used			

## Reading (03) Feedback

The Feedback (Output Frequency) from the PowerFlex 4M drive can be read via the network by sending Function Code 03 reads to register address 8451 (Feedback).

Feedback <sup>(1)</sup>				
Address (Decimal)	Description			
8451	A xxx.x decimal value where the decimal point is fixed. For example, a decimal "123" equals 12.3 Hz and "300" equals 30.0 Hz.			

<sup>(1)</sup> Returns the same data as Reading (03) Parameter d001 [Output Freq].

## Reading (03) Drive Error Codes

The PowerFlex 4M Error Code data can be read via the network by sending Function Code 03 reads to register address 8449 (Drive Error Codes).

Logic Status					
Address (Decimal)	Value (Decimal)	Description			
	0	No Fault			
	2	Auxiliary Input			
	3	Power Loss			
	4	Undervoltage			
	5	Overvoltage			
	6	Motor Stalled			
	7	Motor Overload			
	8	Heatsink Overtemperature			
	12	HW Overcurrent (300%)			
	13	Ground Fault			
	29	Analog Input Loss			
	33	Auto Restart Tries			
8449	38	Phase U to Ground Short			
	39	Phase V to Ground Short			
	40	Phase W to Ground Short			
	41	Phase UV Short			
	42	Phase UW Short			
	43	Phase VW Short			
	63	Software Overcurrent			
	64	Drive Overload			
	70	Power Unit Fail			
	80	AutoTune Fail			
	81	Communication Loss			
	100	Parameter Checksum Error			
	122	I/O Board Fail			

## Reading (03) and Writing (06) Drive Parameters

To access drive parameters, the Modbus register address equals the parameter number. For example, a decimal "1" is used to address Parameter d001 [Output Freq] and decimal "39" is used to address Parameter P109 [Accel Time 1].

## **Additional Information**

Refer to http://www.ab.com/drives/ for additional information.

Notes:

# **RJ45 DSI Splitter Cable**

The PowerFlex 4M drive provides a RJ45 port to allow the connection of a single peripheral device. The RJ45 DSI Splitter Cable can be used to connect a second DSI peripheral device to the drive.

# **Connectivity Guidelines**

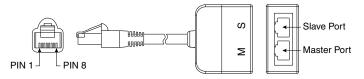

**ATTENTION:** Risk of injury or equipment damage exists. The peripherals may not perform as intended if these Connectivity Guidelines are not followed. Precautions should be taken to follow these Connectivity Guidelines.

- Two peripherals maximum can be attached to a drive.
- If a single peripheral is used, it must be connected to the Master port (M) on the splitter and configured for "Auto" (default) or "Master." Parameter 9 [Device Type] on the DSI keypads and Parameter 1 [Adapter Cfg] on the Serial Converter are used to select the type (Auto / Master / Slave).
- If two peripherals will be powered up at the same time, one must be configured as the "Master" and connected to the Master port (M) and the other must be connected as the "Slave" and connected to the Slave port (S).

# Connecting an RS-485 Network

Customer supplied RJ45 male-to-RJ45 male cables with wires connected at pins 4 and 5 only.

Both the Master (M) and Slave (S) ports on the RJ45 Splitter Cable operate as standard RS-485 ports in this configuration.
